1.0 INTRODUCTION

This Hazardous Waste/ Contaminated Material (HW/CM) Preliminary Screening Assessment (referred to as "HW/ CM Screening" herein) report was prepared for the NYS Route 33, Kensington Expressway Project ("the Project") in the City of Buffalo, Erie County, New York, PIN 5512.52. Project information including the Project location, needs, purpose, and general Study Area is found in the Draft Design Report / Environmental Assessment (DDR/EA). The Study Area for the assessment of hazardous waste and contaminated materials is shown on Figure 1, and includes the area generally bounded by High Street, Genesee Street, Northland Avenue, Wohlers Avenue, and Fillmore Avenue since this area includes the potential Project limits of ground disturbance (including NYS Route 33, Humboldt Parkway, and the adjacent local streets). The approximate limits of the proposed tunnel are from Dodge Street to Sidney Street, a distance of approximately 4,100 feet.

The purpose of the screening phase of the HW/CM Assessment is to identify potential areas of contamination that may be impacted during proposed construction activities. The findings of this assessment can be used to identify locations where the collection and analysis of soil and/or groundwater samples may be warranted to further characterize the subsurface conditions within areas of environmental concern that would be disturbed by proposed construction activities. The sampling results would be used to avoid contaminated areas if otherwise feasible; to identify appropriate material handling, reuse, and disposal options; and to identify public and worker health and safety precautions required during construction. It is the New York State Department of Transportation's (NYSDOT) policy to manage contaminated materials and hazardous substances in accordance with state and federal laws and regulations to minimize the risk of employee exposure to these materials, to protect the public, to prevent further environmental degradation due to the contaminants, and to the extent possible, to reduce NYSDOT's liability for contamination..

2.0 SCOPE AND METHODOLOGY

This HW/CM Screening conforms to the NYSDOT's Transportation Environmental Manual (TEM), Section 4.4.20, Contaminated Materials and Hazardous Substances. The procedures described in the TEM generally follow those steps outlined in the American Society for Testing and Materials (ASTM) Standard Practice E 1527-21, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process," and are also consistent with ASTM Standard Practice E 1528-22, "Standard Practice for Limited Environmental Due Diligence; Transaction Screen Process," and ASTM Standard Practice E 1903-19, "Standard Guide for Environmental Site Assessments: Phase II Environmental Site Assessment Process," and all updates but are adapted to more closely meet the needs of NYSDOT projects.

The HW/CM Screening provides site-specific information in the Study Area and includes three components: a review of public and reasonably ascertainable records; a site reconnaissance or visit to the property or Study Area; and discussions with local government permit officials regarding historical records for sites identified in the database search.

2.1 Investigation of Previous Activities and Site Use

A records search was conducted to determine past or current land uses within and in the immediate vicinity of the Project that may be of environmental concern. Section 2.1.1 through 2.1.5 describe the resources that were used to identify potential environmental concerns for the Project:

2.1.1 USGS Topographic Maps

United States Geological Survey (USGS) Topographic Quadrangle maps were obtained from Environmental Risk Information Services (ERIS), an independent research firm (see Appendix A). These maps provide a historical reference to land use in addition to showing prominent structures, roadways, bodies of water, and topography.

- Buffalo NE, NY: 2019, 2016, 2013, 1965, 1950, and 1948
- Buffalo, NY: 1948, 1901, and 1894

2.1.2 Historic Land Use Maps

The following maps and atlases were reviewed online at Historic Map Works[1] and Warp Maps[2] websites:

- Buffalo 1850-1899 – Charles Magnus
- 1872 Buffalo - City Map
- 1915 City of Buffalo, NY – Index Map

2.1.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were requested and received from ERIS (see Appendix A). Coverage with these maps varies by location. These maps provide a historical reference to land use in addition to showing prominent structures and roadways. Watts reviewed Sanborn maps dated: 1889, 1899, 1900, 1916, 1917, 1926, 1935, 1939, 1950, and 1986.

2.1.4 City Directories

City Directories were reviewed for Buffalo, Erie County, New York for the following years: 1930, 1935, 1940, 1946, 1950, 1955, 1960, 1965, 1971, 1976, 1980, 1985, 1990, 1995, 2000, 2003, 2008, 2012, 2016, 2020, and 2022. The city directories were obtained from ERIS (see Appendix A).

2.1.5 Aerial Photographs

Aerial photographs dated 1927, 1958, 1963, 1970, 1974, 1983, 1990, 1995, 2006, 2008, 2009, 2011, 2013, 2015, 2017, 2019, and 2021 were reviewed in support of this assessment. The aerial photos were obtained from ERIS (see Appendix A).

2.2 Review of Government Records and Databases

The government records search included a review of federal, state, and local government databases of known or suspected inactive hazardous waste sites; petroleum and chemical bulk storage tank sites; reported spills, including leaking underground storage tanks; and hazardous waste generation sites.

2.3 Field Inspection

The field inspection is a walkover of the Study Area to observe potential locations of contamination that may be environmental concerns and affect the design or construction of a Project. Potential environmental concerns may be identified by: stained or discolored soil or building foundations; distressed, dead, or absence of vegetation; air emissions or odors; discolored or sheened surface water or ground water discharges; evidence of previous fill placement or waste disposal; and evidence of previous fires. Additional concerns may be identified by: evidence of former or existing underground storage tanks; aboveground storage tanks; monitoring wells; pipes or pipelines; 55-gallon drums or other evidence of bulk chemical storage and disposal; pump islands; possible PCB storage, including transformers and former transformer pads; railroad tracks; sumps or septic systems; and pits, lagoons, or other surface impoundments. A site walkover reconnaissance of the Study Area was conducted on June 23rd and 26th, 2023 for the suspect sites described in Section 3 below. Photographs from the site walkover reconnaissance are located in Appendix B. No additional detailed environmental information was gathered from the field reconnaissance.

2.4 Interviews

Watts personnel visited the City of Buffalo Department of Permit and Inspection to identify and review information for the suspect sites described in Section 3 below. The permits were reviewed for potential environmental concerns, and copies are available in Appendix C. No individual property owners were interviewed during the walkover of the Study Area.

3.0 FINDINGS

A property is included in this section if it showed the potential to be an environmental concern in the Study Area by one of the methods of assessment listed in Section 2.0. Available information from researched sources is listed for each property followed by an evaluation of environmental concerns or potential impacts for that site.

The following properties are considered to be sites of environmental concern with respect to the Study Area. The Study Area and the location of each property of environmental concern to the proposed Project are shown in Figures 3A-3E (found at the end of this report) by designated site number. The referenced addresses and associated ownership were identified on the City of Buffalo/Erie County Geographic Information System (GIS) Parcel Viewer.

While the following identified properties have the potential to have some degree of environmental impairment, environmental contamination, buried and/or abandoned underground storage tanks, presence of fill, or other recognized environmental condition, their listing below does not necessarily indicate that they have directly impacted the Study Area under review. Each property that may be impacted as part of the proposed construction activities needs to be assessed for the likelihood that contamination may be present in the subsurface.

State Brownfields Site List
One (1) Brownfields record was identified for this site:

- NOCO #S41 - 1055 Genesee Street, Buffalo, NY 14211 – The site was used as a retail gasoline station and convenience store until 2006. Use as a station and auto repair shop appears to have led to site contamination. Remediation at the site is complete. Prior to remediation the primary contaminants of concern were petroleum related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) in soil and groundwater. Remedial activities have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Federal Facility Registry Service/ Facility Index
Two (2) FINDS/FRS record was identified for this site:

- Dollar General Store #12975 – 1055 Genesee Street, Buffalo, NY 14211
- Pyramid Exxon S-41 - 1055 Genesee Street, Buffalo, NY 14211

Registry of Institutional Controls in New York State

One (1) INST record was identified for this site:

- NOCO #S41 – 1055 Genesee Street, Buffalo, NY 14211 - The NOCO #S41 site is an approximately 0.73-acre site located in an urban area at 1055 Genesee Street in the City of Buffalo, Erie County. The site is located on the southeast corner of Genesee Street and Fillmore Avenue. The site is a generally flat urban lot. There is one building on site and the remainder of the site is covered by asphalt and gravel with a small grassy area along the southern boundary. The nearest residential area is adjacent to the southeast boundary of the site. This site is zoned for commercial use and there is currently a retail store on the property. The site was used as a retail gasoline station and convenience store until 2006. Use as a gasoline station and auto repair shop appears to have led to site contamination.

Integrated Compliance Information System

One (1) ICIS record was identified for this site. This record identifies properties that have Federal Administrative and Judicial enforcement actions.

- Pyramid Exxon S-41 – 1055 Genesee Street, Buffalo, NY 14211

NYSDEC City of Buffalo Department of Permit and Inspection

- 1055 Genesee Street - A 1933 permit identifying three 8,000-gallon gasoline tanks was identified, a 1956 permit identifying one 4,000-gallon gasoline tank was identified, and a 1967 permit identifying one 6,000-gallon gasoline tank was identified. A 1957 permit identifying one 4,000-gallon gasoline tank was also identified.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Fifty-Six (56) properties of environmental concern were identified and described in this HW/CM Screening, where forty-eight (48) of the properties are located within the Study Area and eight (8) of the properties are located adjacent but outside the Study Area limits as shown on both Figures 1 and Figures 2A-2E. Each site record was assessed as to whether it may pose an environmental risk and have a chance to affect the Project. Each site is summarized in **Table 1** with a recommendation for either possible additional investigatory work (i.e., a Phase II Environmental Site Assessment), the suggestion that an Environmental Monitor available to review soil conditions and address any concerns identified in the field, the suggestion that the site should be identified on plans and within Project documents, or that the Engineer-In-Charge be notified of the site and its past history in the event that an unusual discovery occurs in the field during construction. These recommendations are made with understanding that the Project will require a combination of property/right-of-way acquisitions, utility installation and replacement, re-grading of current surface features, or general excavation to facilitate the construction of the preferred alternative.

While numerous properties have been identified as potentially having subsurface soil or groundwater contamination or orphan tanks, only a limited number will likely have a physical and economic impact on the Project. The reason for this is that most of the identified sites have been previously remediated; the spills/releases were small and occurred a long time ago; or in a few cases the sites are large in size and the location of historical environmental releases and property impairment may be at a distance from the proposed construction activity. For sites where remediation has occurred, the reviewed documentation describes whether the spill file is open, inactive or closed. While a spill may be closed it is possible that residual contamination is still present at a concentration below the NYSDEC soil cleanup objectives (SCOs). This may be assumed for those spill sites reported as having met NYSDEC's "standard".

From the list, eleven (11) sites are or have been auto repair shops, gas stations or affiliated with auto sales and maintenance. Based on past experience this is a set of historical property usage that often are later determined to exhibit the presence of contamination resulting from the release of fuels, oils, solvent cleaning solutions and other chemicals. These materials may be released from ASTs, USTs, cleaning stations, hydraulic lifts, floor drains, oil/water separators and as a result of intentional dumping. The presence of contamination is more common with older business operated prior to the onset of environmental regulations requiring tank registration and testing and proper waste disposal. Newer businesses established after approximately 1980 are less likely to have handled materials in a manner that would have contributed to contamination of the environment.

Some of these sites may have abandoned and unmarked USTs within or adjacent to the existing Right of Way (ROW) because of known or suspected former use as petroleum storage/retail sites and their proximity to the roadway. Three (3) sites were identified that apparently have or had USTs within the ROW based on the review of historical Sanborn Maps. The tank locations are shown on historic maps therefore they may or may not still be present. Confirmation that the tanks are no longer present would require that a geophysical survey be conducted at these locations to determine whether these USTs and ancillary piping are still present. Locating the USTs would prepare for their proper removal prior to construction; however, their removal, if present, can also be addressed during construction through a contingency in the budget. In addition, a total

of 20 sites have had or currently contain USTs. One of the most common causes of contamination for transportation projects is releases from USTs near the adjacent roadway or utility corridor.

One (1) of the sites is associated with historical manufacturing operations. If deeper excavations (greater than 3 feet) are anticipated in the area of this industrial site, we recommend that a subsurface soil investigation and laboratory analysis for general industrial compounds be conducted or that a contingency be placed within the budget to address possible soil remediation costs during construction.

Two (2) of the sites are current or former dry cleaners that are of concern due to past usage of dry-cleaning compounds. If deeper excavations (greater than 3 feet) are required adjacent to these sites, they should be investigated for the presence of chlorinated solvent contamination in the subsurface by analyzing select soils samples for Target Compound List (TCL) volatiles or that a contingency be placed within the budget to address possible soil remediation costs during construction.

During final design, a detailed Phase II Environmental Site Assessment should be performed at those sites identified within this HW/CM Screening where the collection and analysis of soil and/or groundwater samples may be warranted to further characterize the subsurface conditions within areas of environmental concern that would be disturbed by proposed construction activities. The scope of the Phase II Environmental Site Assessment will include drilling investigations conducted with a direct push "hydraulic" rig or rotary drill rig to collect soil samples for retrieval and examination. Soil samples should be collected and analyzed for both Target Compound List (TCL) and Target Analyte List (TAL) parameters for volatile, semi-volatile, pesticides, herbicides, PCBs, and metals including mercury, cyanide and hexavalent chromium. If any of the results indicate that the sample has the potential to be hazardous, the soil sample should further be analyzed under Toxicity Characteristic Leaching Procedure (TCLP) methodology (EPA method 1311) for the parameter(s) in question. This additional TCLP analysis would allow for the determination of whether the samples meet the definition of RCRA hazardous waste. The results of these field studies would provide information to support the development of environmental remediation cost estimates and to determine budgetary allowances that should be set aside for construction.

Caller Remark:

"PHASE II COMPLETED AND CONTAMINATION DISCOVERED IN GROUNDWATER. LOW LEVEL CONTAMINATION - BENZENE 5 PPB XYLENE 5PPB, LOW LEVEL ACETONE. PROPERTY TRANSACTION PENDING RESOLUTION OF THE ENVIRONMENTAL ISSUES. REPORT WILL BE SUBMITTED ASAP - PHASE I AND II."

DEC Remark:

"3/7/12 AL LYONS PROVIDED THE FOLLOWING UPDATE: As a follow-up to our telephone conversation this afternoon, attached please find the

environmental reports for the above referenced site. As I indicated during our telephone conversation, this site was transformed into a housing complex in 2011. As part of the construction process, the entire area of where the elevated levels were observed was excavated down to below 15'. During the excavation process, Great Lakes was on site to oversee and monitor excavated soils to insure no environmental conditions existed. None were observed. However, in the process of the owner refinancing of the site, a phase I environmental assessment (section from EDA report attached) was conducted which indicated a concern because a drum of solvent was removed from the building. Therefore, a Phase II was recommended. FYI, Great Lakes actually managed the disposal of the drum during the construction project. At the time of discovery, the drum was in tack within the building with no evidence of a spill or release. A copy of the analytical data report to characterize it for disposal is attached. As recommended in the Phase I report, Great Lakes conducted the initial Phase II in January 2012 (report attached). However, because Great Lakes was not an approved vendor for the bank, Passero Associates of Rochester, New York performed a subsequent Phase II (Report Attached). As we discussed, this sampling indicated an elevated level of acetone in the groundwater. Thinking that it was a laboratory contaminant, a subsequent sampling was conducted for the one elevated well (analytical report attached). This sampling also indicated an elevated level of acetone (342 ppb) as well as detections of benzene (5.17ppb), toluene (3.5 ppb), xylene (5.5 ppb), and 2-butanone (81.5 ppb). In summary, all soil sampling results at the site as well as visual observations during construction activities did not indicate any environmental conditions. Therefore, it is my belief that this is not a site issue. In addition, due to the very low level of constituents detected in the groundwater, it does not pose an environmental issue for the site. Therefore, could you please review the attached information and as we discussed and issue a letter of no further action for the site, if appropriate. As discussed, the results of this finding are holding up a substantial amount of money in a refinance of the property and your prompt response would be greatly appreciated. Thank you in advance for your assistance in this matter Albert G. Lyons, Jr., P.E. Vice President/COO Great Lakes Environmental & Safety Consultants, Inc. 50 Ridge Road Buffalo, NY 14218 Office: 716.827.0700 ext. 15 Cell: 716-949-9451 Fax: 716.824.4734 3/8/12 MINOR CONTAMINATION IDENTIFIED AT MW1 AS NOTED ABOVE. GROUND IS CONTAMINATED WITH GASOLINE. OWNERS NAME CAN BE GOTTEN THROUGH CITY COUNCIL BYRAN BROWN 851-5145"

Dec Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was MNP 12/06/96: MNP TELECON W/ CALLER, HE SAID THAT HE CALLED THE DEC HOTLINE ABOUT CONTAMINATION AT THIS SITE. I ADVISED HIM THAT DEC HAS AN INACTIVE SITE STATUS FOR SPILL # 8804436 AT THAT LOCATION. I WILL CHECK TO SEE IF THEIR IS ANY CHANGE. 12/06/96: MNP DISCUSSION W/ TIM DIEFFENBACH, NO CURRENT ACTIVITY AT THE SITE SINCE CONTAMINATED SOIL WAS DISPOSED IN 1994. THE LAST SAMPLE RESULTS WERE LOW ENOUGH TO CLASSIFY THE SITE INACTIVE. 12/13/96: MNP TELECON W/ CLEVELAND MCCLOUD. I ASKED HIM IF THERE WAS ANY NEW SPILLAGE AT THE SITE SINCE 1994, HE SAID NO. HIS CONCERN WAS W/ FUTURE PROPERTY DEVELOPMENT (IE. USE AS A RESTAURANT). I FAXED A COPY OF THE LAST SAMPLE REPORT WHICH DEC USED TO MAKE SITE INACTIVE. REGARDING USE OF THE PROPERTY, I SUGGESTED HE CONTACT THE CITY OF BUFFALO & THE HEALTH DEPT. BASED ON THE INFORMATION WE HAVE, NO FURTHER CLEANUP IS NEEDED AT THIS TIME. SEE SPILL # 8804436, COMPLETE."

LIDDELL ADVISED THAT GES WENT OUT TO CHECK MONITORING WELLS TODAY AND DISCOVERED APPROX. 1 FOOT OF PRODUCT IN MW-2. STATION MANAGER ADVISED THAT THERE WAS A SPILL AT THE PUMP IN DECEMBER THAT HE FELT WAS LESS THAN 5 GALS. TO PAVEMENT. GES FEELS THAT SPILLAGE WAS PROBABLY MORE SIGNIFICANT THAN THAT (POSSIBLY 25 GALS.) AND BECAUSE OF DAMAGE TO THEIR WELL BOX BY SNOW PLOW THEY CAN SEE WHERE THAT SPILLAGE WENT INTO THE MW. THEY ARE GOING TO CHECK WELL AGAIN NEXT WEEK TO SEE IF IT IS STILL FREE OF PRODUCT (THEY ARE GETTING AS MUCH OF THE PRODUCT OUT OF IT TODAY AS POSSIBLE). 01/22/01 JFO CALL TO DOUG LIDDELL OF GES. ON FRIDAY THEY HAD A VAC-TRUCK ON SITE AND REMOVED APPROX 50 GALLONS OF LIQUID, 5-10 GALLONS OF DIESEL. HE WAS OUT TO THIS SITE TODAY TO CHECK THE WELL FOR PRODUCT AGAIN. THEY FOUND NO PRODUCT IN THE WELL. HE IS GOING TO GET A VAC-TRUCK OUT THERE AGAIN TO VAC THE WELL. THIS SITE IS GOING TO BE TOTALLY UPGRADED IN THE SPRING OF 2001. HE WILL FORWARD THE INVESTIGATION REPORT TO ME ALONG WITH ANY RECENT PROGRESS TO DATE. 02/01/01 JFO RECEIVED SITE ASSESSEMENT FROM DOUG LIDDELL. SB-3 AT 1'-2' INDICATES HEAVY CONTAMINATION. THE SAMPLES WERE COLLECTED JUNE 20, 2000. ALSO MW-2 AND MW-4 INDICATE GW CONTAMINATION. 1,2,3 AND 4 MTBE >10 PPB. 03/20/01 JFO RECEIVED QUARTERLY ROUND OF SAMPLE RESULTS FOR THE GROUNDWATER. THE STATION UPGRADE WILL TAKE PLACE BETWEEN APRIL AND JUNE. 05/08/01 JFO MEETING WITH RICH CICCOTELLI, DOUG LIDDELL AND BOB LEARY. THEY SAMPLED ALL FOUR WELLS ON THE SITE LAST WEEK, THE RESULTS WILL FOLLOW ALONG WITH A NEW SCHEDULE FOR THE UPGRADE AND REMEDIATION. 06/15/01 JFO RECEIVED THE ANALYTICAL FOR THE MAY SAMPLING EVENT. THE RESULTS FOR BTEX AND MTBE IN MW 1,2 &4 ARE ABOVE GROUNDWATER STANDARDS. NEXT SAMPLING EVENT WILL TAKE PLACE IN JULY. 09/24/01 JFO RECEIVED THE ANALYTICAL FOR THE JULY SAMPLING. WELL #1 BTEX AND MTBE NON-DETECT. WELL #2 IS DRY. WELL #3 BTEX IS NON-DETECT AND MTBE IS 22 ppb. WELL #4 BENZENE 6.2ppb, T & X ARE NON-DETECT, ETHYLBENZENE 11ppb. 11/13/01 JFO MEETING WITH MOBIL EXXON. THEY WILL INSTALL 5 SOIL BORINGS. 1 TO THE WEST OF MW-2, 2 IN THE SOUTHWEST CORNER OF THE PROPERTY AND 2 ON THE FILLMORE SIDE OF THE UTILITIES IN THE STREET. IN THE NORTH SOIL BORING A WELL WILL BE INSTALLED. 7/10/02:JAA & SAC MEETING W/RICH CICCOTELLI - EXXONMOBIL & DOUG LIDDELL - GES, PHASE II INVESTIGATION HAS BEEN COMPLETED EXCEPT FOR ONE WELL THAT MUST BE INSTALLED IN THE RIGHT OF WAY BASED ON MTBE LEVELS FOUND IN AN ON-SITE WELL, THEY WILL BE SUBMITTING THE REPORT SOON, THEY WILL THEN BE CONSIDERING WHICH REMEDIAL APPROACH TO USE ON SITE, MR. CICCOTELLI WOULD LIKE TO USE REMEDIAL APPROACH THAT WOULD TAKE THE SHORTEST TIME TO GET TO NO FURTHER ACTION STATUS, THE STATION HAS BEEN INACTIVE FOR ABOUT 6 MONTHS, THEY HAVE NOT CONSIDERED WHAT THEY INTEND TO DO WITH THE TANKS AND WILL CHECK WHETHER THEY STILL CONTAIN PRODUCT AND THE STATUS OF THEIR REGISTRATION. 10/31/02 JFO MTG WITH RICH C. DEC Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was JFO 03/19/02 JFO AND BFG ON SITE AND MET WITH MS ANNETTE JACKSON THE RESIDENT OF THE SPILL SITE. THE GAS CO. WAS ORIGINALLY CALLED TO THE HOUSE, THEY SHUT OFF THE GAS AND TOLD MS JACKSON TO CALL THE FIRE DEPT. THE FIRE DEPT SHOWED UP AND CALLED US. THERE ARE STRONG GASOLINE ODORS IN THE HOUSE. WE ARE GETTING VERY HIGH PID READINGS IN THE BASEMENT (>2000PPM). THERE ARE 5 UNREGISTERED VEHICLES IN THE

DRIVEWAY NEXT DOOR AT 214 BRUNSWICK, ON THE SIDE OF THE BASEMENT WHERE THE ODORS ARE COMING FROM. I KNOCKED ON THE DOOR AT 214 BRUNSWICK, NO ONE ANSWERED. THERE ARE OIL STAINS ALL OVER THE DRIVEWAY. ALSO THERE ARE TWO ENGINE BLOCKS LEAKING OIL IN THE DRIVEWAY ALONGSIDE MS JACKSON'S HOUSE. I THEN HIRED NATURE'S WAY TO INSTALL AN EXHAUST FAN AND BEGIN A SUBSURFACE INVESTIGATION. MR MILES THEN SHOWED UP ON SITE, I EXPLAINED TO HIM THAT THERE WAS A GASOLINE SPILL COMING FROM HIS DRIVEWAY AND ENTERING THE BASEMENT IN THE HOUSE NEXT DOOR AND WE HIRED A CONTRACTOR TO CLEAN IT UP. I ALSO TOLD HIM THAT WE CONSIDER HIM RESPONSIBLE FOR THE SPILL AND HE WOULD HAVE TO PAY ALL COSTS INCURRED BY THE STATE. AT 7 TOM WOLFLE AND 2 HELPERS FROM NATURE'S WAY SHOWED UP ON SITE. THEY CHECKED THE BASEMENT WITH A PID METER AND GOT 3800PPM. THEY PUT A TEMPORARY BLOWER IN THE BASEMENT WINDOW TO REMOVE THE ODORS. THEY BROKE UP A SMALL AREA IN THE FLOOR WHERE THE ODORS ARE THE STRONGEST AND THEY ARE INSTALLING AND THE EXHAUST FAN. TOM W. SAID MS. JACKSON CAN CONTACT THE GAS CO. TO TURN THE GAS BACK ON. 03/21/02 JFO ON SITE MET WITH MS JACKSON. I CHECKED THE BASEMENT WITH PID AT THE FAN AND GOT 1-3 PPM. AT THE VENT OUTSIDE THE READINGS ARE 15PPM. THERE ARE NO ODORS IN THE HOUSE. THERE IS A SLIGHT ODOR IN THE BASEMENT. NO READINGS AT THE SEWER OF SUMP. 04/01/02: TERRENCE MILES TELECON BFG AND SAID HE CLEANED UP OIL STAINS ON HIS DRIVEWAY. BFG SITE VISIT - OBSERVED OIL STAINS REMAIN IN DRIVEWAY, 2 ENGINES HAD BEEN REMOVED AND FAN IS STILL OPERATING AT MS JACKSONS HOUSE. 04/22/02 JFO RECEIVED PP FOR MATERIALS AND WORK DONE BY NW ON MARCH 19 & 20. AMT $1291.27, SUBMITTED TO SAC. 05/10/02 JFO SPOKE WITH GREG W OF NW. THEY WILL REMOVE THE FAN NEXT WEEK AND PATCH THE FLOOR. 05/13/02 NATURE'S WAY REMOVED THE EXHAUST FAN AND PATCHED THE FLOOR. I WILL CHECK NEXT MONTH IF THERE ARE ANY PROBLEMS. 06/17/02 JFO REC'D PP FOR MATERIAL AND WORK ON MAY 13, 2002. AMT $202.52, SUBMITTED TO SAC. 06/21/02 JFO CALL TO MS JACKSON. THERE HAS BEEN NO PROBLEMS WITH ODORS IN THE HOUSE OR BASEMENT. NO FURTHER ACTION REQUIRED. CLOSED"

THE ODORS HAVE SUBSIDED IN THE STORE BUT STILL SLIGHT ODORS EXIST IN THE BASEMENT. THERE IS FOX AUTOMOTIVE SHOP (894-5700)NEXT DOOR AT 908 GENESEE STREET THAT THEY BELIEVE MAY BE PUTTING SPENT AUTO FLUID IN A DRAIN ALONGSIDE THEIR BUILDING. THE GATE IS LOCKED SO I CAN'T CHECK THE DRAIN. I WILL RETURN IN THE MORNING WHEN THE AUTO BUSINESS IS OPEN. 09/01/05 JFO ON SITE MET WITH CHIEF N. NO ONE AVAILABLE IN THE SHOP. Thanks, Jason Paananen, AICP Director of Environmental Affairs City of Buffalo Mayor's Office of Strategic Planning 901 City Hall Buffalo, NY 14202 716-851-5406 7/11/17 The City of Buffalo provided an update: Good morning. Just following up with you from our conversation Friday. The City is currently in the process of preparing to transfer the land over to the Buffalo Urban Development Corporation. Once the land is transferred to them I will request a revised timeframe for the work. I still think it will occur this summer but I will provide you with more information once I know more. Thanks, Jason Paananen, AICP Director of Environmental Affairs City of Buffalo Mayor's Office of Strategic Planning 901 City Hall Buffalo, NY 14202 716-851-5406 1/19/18 FG requested an update from Jason Paanenan with the City of Buffalo. 1/22/18 Hi Francine, I am awaiting the Law Department's review of Vermont Street as the tanks were permitted to the previous owner of the property. Let me check with them on the status. I will follow-up with BUDC on the Fillmore property as they were supposed to be starting work on that once the real estate contract was completed with the City. There might have been an issue with the contract so let me see what the delay is. Thanks, Jason Paananen, AICP Director of Environmental Affairs City of Buffalo Mayor' s Office of Strategic Planning 901 City Hall Buffalo, NY 14202 716-851-5406 2/2/18 Hi Francine, Sorry for the delay. In regards to 1669 Fillmore Avenue, BUDC is finalizing contracts between the City and the property should be transferred to them in the next month as there was an issue with lot combinations as part of the Northland project. Once this happens they should begin work in early spring to remove the tank and contaminated soil. I will keep you posted as this progresses. Thanks, Jason Paananen, AICP Director of Environmental Affairs City of Buffalo Mayor's Office of Strategic Planning 901 City Hall Buffalo, NY 14202 716-851-5406 7/24/18 Hi Francine, I forwarded your request to Mike Finn at DPW on Friday so hopefully I will hear back this week. I know he had to run the options by his boss before a decision was made. I'll let you know once I receive an answer. The property swap with the City has not taken place as of yet. BUDC's land swap with the City of Buffalo, which did include 1669 Fillmore is 90% complete after three long years. The deeds were signed on 11/24/20, and the transaction was closed and filed on 12/18/20. I am waiting for final confirmation from the City's Tax and Assessment Department, which should come shortly. As you are aware, I have a price for the tank closure from LaBella from 2017. I have asked Rob Napieralski to update that price for me, so that I can discuss it with our Real Estate Committee at their February meeting. I am hoping that I do not have to rebid the project and can identify a funding source to advance things as soon as possible. PMC Peter M. Data Source:
Site Name: NOCO #S41
Site Name (Web): NOCO #S41
Site name (GIS): NOCO #S41
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc:
Assess DOH: Public drinking water is supplied to the area so exposure to contaminated groundwater is not expected. Exposure to contaminated subsurface soil is unlikely as the area is paved with asphalt. The potential for soil vapor intrusion was evaluated and determined not to be an exposure issue.

Description:

Location: The NOCO #S41 site is an approximately 0.73-acre site located in an urban area at 1055 Genesee Street in the City of Buffalo, Erie County. The site is located on the southeast corner of Genesee Street and Fillmore Avenue. Site Features: The site is a generally flat urban lot. There is one building on site and the remainder of the site is covered by asphalt and gravel with a small grassy area along the southern boundary. The nearest residential area is adjacent to the southeast boundary of the site. Current Zoning and Land Use: This site is zoned for commercial use and there is currently a retail store on the property. Past Use of the Site: The site was used as a retail gasoline station and convenience store until 2006. Use as a gasoline station and auto repair shop appears to have led to site contamination. Site Geology and Hydrogeology: The geology at the site is generally described as fill materials overlying dense brown/reddish-brown silty clay. The fill materials consist of silt, sand, and gravel with varying amounts of brick fragments at depths ranging from 1.5 to 8 feet below ground surface (fbgs). The site is situated over the Onondaga Formation of the Middle Devonian Series. The Onondaga Formation is comprised of a varying texture from coarse to very finely crystalline with a dark gray to tan color and chert and fossils within. The unit has an approximate thickness of 110 to 160 feet. Local groundwater flow was determined to be towards the south/southeast. Depth to groundwater averages on site from 6 to 13 fbgs.

Assessment:

Remediation at the site is complete. Prior to remediation the primary contaminants of concern were petroleum related volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) in soil and groundwater. Remedial activities have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Caller Remark:

"DURING PBS INSPECTION, NOTED ODOR & SHEEN IN MONITORING WELLS, ODORS IN TANK SUMPS, AND ODOR IN MEDIUM OCTANE ATG

SUMP. ALSO, POOR EQUIPMENT MAINTENANCE; LINE LEAK DETECTORS OLD AND RUSTING."

DEC Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was FG 11/27/02 LEFT A PHONE MESSAGE FOR ART MUELLER WHO WORKS FOR NOCO TO CALL BACK DUE TO THE SPILL FOUND DURING THE PBS INSPECTION. 12/2/02 HAVE NOT HEARD BACK FROM MR. MUELLER SO A LETTER SENT REQUESTING A SITE ASSESSMENT HAS BEEN SENT. A RESPONSE IS DUE BY 12/16/02. 12/9/02 ART MUELLER CALLED AND SAID THAT HE HAS BEEN OUT FOR A WEEK. HE REQUESTED A COPY OF THE PBS INSPECTION WHICH WAS FAXED TO HIM. HE SAID HE WILL INSPECT THE SITE HIMSELF AND PROVIDE HIS RESPONSE. 1/29/03 FG MET ART MUELLER ON SITE TODAY. WE INSPECTED ONE TANK PIT WELL AND FOUND A SHEEN AND STRONG GASOLINE ODORS. MR. MUELLER DID NOT HAVE THE CORRECT SAMPLE BOTTLES FOR SUBMISSION TO THE LAB. HE SAID HE HAD PUMPED OUT THE TANK PIT WELLS PREVIOUSLY AND 1200 GALLONS WERE PUMPED OFF. THE WATER WAS TAKEN TO THEIR TERMINAL IN TONAWANDA. I TOLD HIM WE WOULD NEED DOCUMENTATION ON THIS. I TOLD HIM ADDITIONAL INVESTIGATION AND REMEDIATION ARE NECESSARY ON THE SITE DUE TO THE PRESENCE OF GASOLINE IN THE WELLS. HE SAID HE WILL SPEAK TO DENNIS BARRY AND MIKE YOUNT ABOUT THE SITE. HE SAID HE RECENTLY TESTED THE UST'S AND LINES FOR TIGHTNESS AND THEY ARE TIGHT. 2/3/03 FG SPOKE TO DENNIS BARRY WHO SAID THEY WANT TO EVACUATE THE WELLS AGAIN AND DISPOSE OF THE WATERS. I TOLD HIM TO PROVIDE DOCUMENTATION ON ALL THE WORK THAT HAS BEEN DONE AND DISPOSAL RECEIPTS AND WHATEVER ELSE THEY WANT TO DO. 3/5/03 FG SPOKE TO DENNIS BARRY AND MIKE YOUNT. THEY SAID THEY COMPLETED ALL THE WORK ASSOCIATED WITH DEFICIENCIES NOTED IN THE PBS INSPECTION. THEY WANT TO PUMP OUT THE UST PIT AGAIN BUT THEY WOULD LIKE TO USE A SURFACTANT. THEY WILL THEN MONITOR THE WELLS WEEKLY AND SAMPLE FOR ANALYSIS ON A REGULAR SCHEDULE. I TOLD THEM TO PUT THEIR PROPOSAL IN WRITING AND IDENTIFY WHERE THE WATERS ARE GOING FROM THIS PUMP OUT AND PREVIOUS ONES. THEY AGREED THAT THEY WOULD PUT THEIR PROPOSAL IN WRITING AND SUBMIT IT. THEY WILL CONTINUE TO MONITOR THE WELLS FOR ONE YEAR AFTER ANALYTICAL RESULTS SHOW THEY ARE CLEAN. 4/15/03 FG SPOKE TO MIKE YOUNT WITH NOCO. HE SUBMITTED A REMEDIAL PROPOSAL WHICH STATED HE ALREADY ADDED THE SURFACTANT AND ALREADY PUMPED OUT THE TANK WATERS. I IDENTIFIED SEVERAL DEFICIENCIES IN THE PROPOSAL AND PUT THEM IN WRITING. NOCO NEEDS TO PROVIDE PREVIOUS WORK COMPLETED, ANALYZE FOR THE ENTIRE STARS LIST, MEASURE WATER RECOVERY AND PROVIDE BIWEEKLY TANK PIT WELL OBSERVATION REPORTS ALONG WITH THE QUARTERLY REPORTS. 7/29/03 NOCO SUBMITTED THEIR FIRST QUARTERLY REPORT WHICH SHOWS THAT THERE ARE SIGNIFICANT GROUNDWATER IMPACTS FROM GASOLINE. ONLY 1 TANK PIT WELL WAS SAMPLED FOR ANALYSIS, WELL#4, WHICH IS NOT IDENTIFIED ON ANY MAP. RESULTS ARE AS FOLLOW: MTBE 12600PPB BENZENE 1480 TOLUENE 12600 ETHYLBENZENE 1350 M,P XYLENE 11300 0 XYLENE 4930 ISOPROPYLBENZENE 102 N PROPYLBENZENE 176 135 TRIMETHYLBENZENE 644 124 TRIMTHYLBENZENE 2580 N BUTYLBENZENE 179 NAPHTHALENE 251 THIS IS THE ONLY ANALYSIS WE HAVE AVAILABLE. THERE IS NO BASELINE PRIOR TO TREATMENT TO COMPARE THESE RESULTS TO. THERE IS NO INSPECTION REPORT FOR THE DAY THESE SAMPLES WERE TAKEN. 7/29/03 FG SPOKE TO MIKE YOUNT WITH NOCO WHO SAID THAT HE WILL SPEAK TO DAVE KINGSLEY AND GET BACK TO ME REGARDING WHAT ACTIONS THEY WILL TAKE AT THIS SITE. HE WILL RESPOND TODAY. 7/29/03 MIKE YOUNT CALLED BACK AND STATED HE WOULD GENERATE A PLAN FOR THE SITE WORK AND WOULD PROVIDE THAT INFORMATION WITHIN ONE WEEK. 10/7/03 MIKE YOUNT FAXED A SENTINEL PROPOSAL TO EXTRACT WATER FROM ONE WELL MIX IT WITH BIO MATERIAL AND INJECT IT BACK INTO ANOTHER TANK PIT WELL. FG SPOKE TO MIKE YOUNT INDICATING THAT ONCE YOU REMOVE CONTAMINATED WATER FROM THE GROUND YOU CAN'T PUMP IT BACK IN. I TOLD HIM HE WOULD HAVE TO LOOK FOR THE SOURCE OR CONFIRM THAT IT ISN'T IN THE SURROUNDING SOILS. WE ONLY HAVE ONE GW DATA POINT AND THAT IS AT APPROXIMATELY 50PPM TOTAL 8021 COMPOUNDS. HE SAID HE WILL DO SOME SUBSURFACE WORK SURROUNDING THE UST PIT VERY QUICKLY. HE WILL ALSO FAX THE TIGHTNESS TEST COMPLETED FOR THE TANK AND LINE SYSTEM. 11/18/03 MIKE YOUNT 504-3319 CALLED AND SAID HE IS HAVING CRAIG SLATER REVIEW THE SITE DUE TO THE COMPLEXITY OF THE ISSUES. THE SITE WAS A FORMER CUMBERLAND. NOCO WILL DO SUBSURFACE SAMPLING. HE IS TO CALL BACK. 12/8/03 ANGELA DEMERLE WITH HARTER SECREST CALLED AND SAID THAT A LIMITED PHASE 1 WILL BE COMPLETED BY JANUARY 15, 2003. THEY WILL THEN DO A PHASE 2 BASED ON THE REPORT. 1/12/03 ANGELA DEMERLE CALLED AND SAID THEY ARE IN THE PROCESS OF COMPLETING A PHASE I INVESTIGATION ON THE SITE. 3/12/04 ANGELA DEMERLE SAID THAT SHE WILL HAVE A PHASE I INTO THE OFFICE WITHIN TWO WEEKS. 5/11/04 MS. DEMERLE CALLED AND SAID THE PHASE I WILL BE SUBMITTED BY THE END OF THIS WEEK. 7/6/04 CALL INTO MIKE YOUNT WITH NOCO. 7/7/04 MIKE YOUNT WITH NOCO CALLED AND SAID HE WILL SUBMIT THE PHASE I BY THE END OF THIS WEEK. 7/16/04 NOCO SUBMITTED THE PHASE I THEY COMPLETED. HISTORICAL INFORMATION INDICATES THE PROPERTY WAS A GULF AND THEN CUMBERLAND STATION. UST REMOVAL WAS CONDUCTED IN 1988 BY CUMBERLAND. THEY REMOVED CONTAMINATED SOIL AND BIOREMEDIATED IT ABOVE GROUND. EXCAVATION SAMPLES WERE NOT COLLECTED. NOCO INDICATES THEY ARE FULLY INDEMNIFIED FOR CLEANUP COSTS FROM CUMBERLAND AND WILL PURSUE THEM. THEY HAVE ASKED THAT DEC WAIT FOR THE RESOLUTION. 9/3/04 SENTINEL SUBMITTED A SCOPE OF WORK FOR THE SITE. 5 BORINGS WILL BE COMPLETED ON 9/22/04 WITH A REPORT OF FINDINGS PROVIDED ON 10/15/04. 9/22/04 FG SITE INSPECTION. MET DAVE KINGSLEY WITH SENTINEL ON SITE. HE INSTALLED WELLS AROUND THE NORTH SIDE OF THE UST PIT AND FOUND NO CONTAMINATION. HE WOULD NOT DRILL ON THE SOUTH SIDE OF THE UST PIT BECAUSE THE UTILITIES AND THE TANK LINES WERE NOT PROPERLY MARKED. I TOLD MR. KINGSLEY THAT THIS WOULD BE AN INCOMPLETE INVESTIGATION AND ADDITIONAL BORINGS OR TEST PITS WOULD HAVE TO BE PLACED IN THIS AREA. 10/28/04 RECD THE SENTINEL SUBSURFACE INVESTIGATION REPORT. 10 SUBSURFACE BORINGS WERE COMPLETED TO REFUSAL WHICH WAS 8 FT DEEP. ONE BORING, B5 SHOWED CONTAMINATION ABOVE TAGM LEVELS IN THE WATER AND SOILS. NO SAMPLING WAS COMPLETED IN THE AREA OF THE UNDERGROUND LINES. SENTINEL INDICATES THAT FORENSIC ANALYSIS SHOWS THE CONTAMINATION PREDATES NOCO'S INVOLVEMENT AT THE SITE BUT THEY DO NOT PROVIDE A COPY. SENTINEL ALSO INDICATES THAT THEY WILL BE PREPARING A COURSE OF ACTION TO ADDRESS THE SUBSURFACE IMPACTS EXCEEDING THE NYSDEC'S REGULATORY CLEANUP OBJECTIVES. THEY DO NOT PROVIDE A DATE WHEN THIS WILL BE SUBMITTED. 11/8/04 CALL INTO DAVE KINGSLEY WITH SENTINEL TO ASK ABOUT A SUBMISSION DATE AND WHETHER OR NOT THEY ARE CLAIMING THEY NOCO IS RESPONSIBLE FOR THE CONTAMINATION ON SITE. 11/16/04 MR. KINGSLEY NEVER RETURNED MY CALL SO A LTR WAS SENT REQUESTING A WORK PLAN BY 12/3/04. 12/23/04 SENTINEL SUBMITTED THEIR RESPONSE TO MY 11/16/04 LETTER. THEY DO NOT BELIEVE THEY ARE RESPONSIBLE BUT WILL DO THE SITE WORK. SENTINEL WILL SUBMIT A REMEDIAL ACTION PLAN BY 12/31/04. 1/5/05 SENTINEL DID NOT SUBMIT A REMEDIAL ACTION PLAN BUT HAS REQUESTED TO SUBMIT THREE QUARTERS OF GW MONITORING AND THEN SUBMIT A REMEDIAL ACTION PLAN IN JUNE 2005. 1/21/05 SENTINEL SUBMITTED A GW SAMPLE RESULT FROM THE TANK PIT. THE RESULTS ARE 606.5 PPB TOTAL 8260 STARS LIST COMPOUNDS. 3/30/05 RECD THE SAMPLING RESULTS FROM THE MARCH QUARTERLY SAMPLING EVENT. RESULTS ARE FROM TWO TANK FIELD WELLS: TANK FIELD WELL TANK FIELD WELL BENZENE 21.8 5.2 OXYLENE 160 52.9 MIXED XYLENE 10.9 26.7 124TRIMETHYLBENZENE 11.8 35.7 135TRIMETHYLBENZENE 10.5 NAPTHALENE 65 14 ALL RESULTS IN PPB. 02/23/06: MF T/C MIKE YOUNT, LEFT MESSAGE TO RETURN CALL.

03/27/06: MF UPDATE LETTER TO RP, RESPONSE BY 4/15/06. 11/2/06 FG, DKK, MLD, CHAD STANISZEWSKI, JOE RYAN ALL WITH DEC MET WITH NOCO - MIKE YOUNT, CRAIG SLATER, MIKE LESAKOWSKI. MET TO DISCUSS POSSIBLE BROWNFIEL APPLICATION. NOCO IS PLANNING ON KNOCKING DOWN AND REBUILDING THE STATION. THEY BOUGHT THE PROPERTY FROM CUMBERLAND IN 1993 AND BELIEVE THE SITE CONTAMINATION IS FROM CUMBERLAND. WE AGREED THAT IF WITHIN 30 DAYS FROM TODAY IF THE BROUWNFIELD APPLICATION IS NOT SUBMITTED, THEN SPILLS WILL PURSUE. 5/11/07 NOCO SUBMITTED A BROWNFIELD APPLICATION FOR THE WORK AT THIS SITE AND IT HAS BEEN ACCEPTED BY THE DEPARTMENT. SPILLS FILE IS CLOSED. DER WILL PURSUE REMEDIAL ACTION."

Dec Remark:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was TED 06/17/97: MNP INSP. MET W/ BRIAN CAREY - FLUOR DANIEL GTI. THEY DUG 11 TEST PITS DOWN TO CLAY (4' TO 10') & FOUND GASOLINE CONTAMINATED SOIL IN MOST OF THEM. I NOTED A VERY STRONG GASOLINE ODOR & VISIBLE STAINING. I ADVISED THEM TO EXCAVATE CONTAMINATED SOIL PER DEC'S LAST CORRESPONDENCE TO MOBIL. I RECOMMEND CLOSURE OF THIS SPILL & CONTINUE FOLLOWUP ON SPILL #9613019 BY TED (STILL ACTIVE). 06/18/97: RNL NOTES, SEE SPILLS 8911069 (NOW INACTIVE) AND 9613019. SPILL 9713019 IS A DUPLICATE OF THIS SPILL, ALL THESE SPILLS INVOLVE THE SAME SITE WHICH IS NOW A FORMER MOBIL STATION BEING DEVELOPED AS A RITE AID STORE 06/18/97: RNL TELECON FROM KEVIN CRONIN, FLUOR-DANIEL, ASKED IF THEY COULD MOVE CONTAMINATED SOIL FROM SITE TO THE MOBIL TERMINAL FOR BIOTREATMENT, I SAID OK, HAD TO KEEP SOIL SEPARATE FROM EXISTING SOIL AT TERMINAL, PLACE ON PLASTIC, ETC., OK. 06/18/97: MNP & TED DISCUSSION. WE AGREED TO CLOSE THIS SPILL & KEEP SPILL # 9613019 OPEN BECAUSE WE HAVE ALREADY SENT OUT CORRESPONDENCE FOR THAT SITE. NO FURTHER ACTIION NEEDED FOR THIS SPILL #, COMPLETE. "

SEASE. 12/6/2006: MR. SEASE TELECON RJJ,HE SAID THAT HE WILL PLACE ALL THE BOTTLES OF CHEMICALS IN HIS GARAGE FOR STORAGE,THEN WILL TAKE THEM TO THE NEXT HOUSEHOLD HAZARDOUS WASTE COLLECTION IN ERIE CO.,WHICH MIGHT NOT BE UNTIL SPRING OF 2007...I TOLD HIM THAT SINCE THEY ARE NOT LEAKING AND STORED PROPERLY,THIS WOULD BE ACCEPTABLE,IF THEY WILL ACCEPT THESE BOTTLES. 2/28/2007: RECEIVED THE 'RP' LETTER RETURNED,UNDELIVERED...IT IS STAMPED 'VACANT'. 4/25/2007: RJJ AT SITE AT 1300...NO ONE WAS HOME SO I LEFT A MESSAGE FOR MR. SEASE AND THAT THE ONLY CHEMICAL THAT LEAKED OUT WAS A SMALL AMOUNT OF PHENOL ALL INSIDE THE DUMPSTER,NO FURTHER ACTION IS NEEDED...SPILL CLOSED OUT...(IF IN THE FUTURE, MR. SEASE OR ANY NEW OWNER DOES OCCUPY THIS PROPERTY,WE WILL CONTACT THEM TO PROPERLY DISPOSE THESE CHEMICALS AT THAT TIME)...ALSO,I TELECON TOMMY FITZPACTRICK,BUFFALO FIRE DEPT.,AND TOLD HIM THAT THE CHEMICALS ARE STILL IN THE GARAGE."

"11/21/11 FG SITE INSPECTION. MET SALEH MUTHANA, OWNER. HE SAID THAT THE PUMP WAS HESITATING AND HE CALLED REID. THEY CONDUCTED A TIGHTNESS TEST AND THE LINES FOR THE UNLEADED FAILED. THE PUMPS WERE SHUT DOWN. HE WILL BE SWITCHING PRODUCT TO THE SUPER TANK TO CONTINUE OPERATING AND WILL COME UP WITH A PLAN TO DETERMINE THE CAUSE OF THE LEAK, REPAIR IT AND RETEST. 11/23/11 ED BEALE PROVIDED THE FOLLOWING UPDATE: Tom Michaels was contracted on Wednesday afternoon to test the line at Gold star that we could not pass. It turns out a special isolation plug is produced by Estabrooke for this type of submersible that allows isolation of the line. Our plug does not. He passed the line. I spoke with him and he agreed to forward us the results. I have not received them yet. Edwin Beale Reid Petroleum Corp. Construction and Service Manager cell 716-225-5347 office 716-434-2885 ext 319 ebeale@reidpetroleum.com 11/25/11 ED BEALE WITH REID PROVIDED THE FOLLOWING UPDATE: Here is the passing leak detector results and the failed line test on Monday by our tech Eric Vukovic. Part of our test procedure is to determine if the submersible is holding line pressure Through its own series of check valves. It was not. To confirm the line was tight we needed to isolate if from the submersible head. Our equipment could not effectively isolate the line . At the time of the call we believed the line was possibly in failure. After further researching on Wednesday we learned of an isolation plug effective to isolate and test this particular submersible. The owner contracted with Leak Detection System's on Wednesday for a retest. Here are passing test results Leak Detection System's generated with his test . Please call if you have questions. Edwin Beale Reid Petroleum Corp. Construction and Service Manager cell 716-225-5347 office 716-434-2885 ext 319 ebeale@reidpetroleum.com 11/28/11 THE PASSING RETEST LINE RESULTS WERE PROVIDED. Site Class Desc: This classification is assigned to a site at which:

a. the disposal of hazardous waste has been confirmed and the presence of such hazardous waste or its components or breakdown products represents a significant threat to public health or the environment: or
b. hazardous waste disposal has not been confirmed, but the site has been listed on the Federal National Priorities List (NPL).

Assess DOH: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. No off-site soil impacts have been identified to-date. People are not expected to come into direct contact with contaminated groundwater unless they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion in the on-site building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Data Source:

Assessment:

Nature and Extent of Contamination: Based on investigations completed to date, the primary contaminants of concern are trichloroethene (TCE), 1,1,1-trichloroethane and free phase petroleum products. Solvent contaminated soil containing TCE was remediated on the southern portion of the site in the mid-1990s. Groundwater concentrations of TCE have steadily decreased following this soil remediation. Low level concentrations of chlorinated solvents remain in the groundwater at the southern end of the site. A removal action was undertaken by USEPA to remove asbestos and PCBs from light ballasts, capacitors and associated contamination throughout the facility. Additionally, mercury containing switches and lamps were removed and disposed. The removal action was complete on September 9, 2009. A supplemental investigation completed in 2010 identified additional TCE contamination in groundwater north of the previously impacted groundwater plume. Additional investigation will be required to determine the nature and extent of this contamination. Subsurface petroleum products have been identified in multiple on-site monitoring wells. A specific source of the petroleum has not been determined, however, it is likely the result of numerous spills and leakage over the life of the facility. Significant dissolved phase petroleum contamination has not been identified in the groundwater. An off-site soil vapor intrusion investigation (indoor air and subslab), completed in the spring of 2012, found no significant off-site impacts due to existing groundwater contamination. A re-evaluation is necessary once the building is demolished and additional remedial investigation is completed and/or remedial actions implemented. A soil gas survey completed in the fall of 2015 identified potential source areas requiring additional remediation under the central-northern portion of the existing building. Subsequent sampling of a sump in this area indicate a potential VOC source area.

Description:

Location: The Vibratech site is an approximately 10.522-acre site located in a mixed industrial/commercial/residential area at 537 East Delavan Avenue in the City of Buffalo, Erie County. Site Features: The main site features include two and three story brick buildings covering more than half of the site. The remainder of the site is covered with asphalt. Current Zoning and Land Use: The site is currently zoned for light industrial use. The buildings in the northern portion of the site are currently being utilized for dismantling and metals recycling. The remainder of the site is inactive. The site is surrounded by residential, commercial and industrial properties. Past Use of the Site: The site was utilized for the manufacture of vibration dampeners and rotary shock absorbers for the truck and railroad industry from 1927 through the mid-1990s. Specific operations at the plant included chip turning, assembly of components, heat treating and plating. Site Geology and Hydrology: The site is covered by buildings and asphalt underlain by sandy gravel fill containing ash and cinders to a depth of 1 to 7 feet below ground surface (fbgs). Natural soils identified below the fill consist of fine textured lake deposited sediment with a clayey-silt texture and/or glacial deposits extending to the top of bedrock located 2 to 12 fbgs. Bedrock is fractured and is typical of the Onondaga Limestone Formation. Depth to groundwater is generally 4 to 12 fbgs trending west and north, influenced near surface by utilities and the Scajaquada Drain.

HE WILL PREPARE A REPORT OF BACKGROUND INFORMATION AND SURVEY THE SITE. A MAP WILL BE GENERATED AND DECISIONS ON ADDITIONAL FIELD WORK WILL BE MADE AFTER THIS. 1/8/03 FG SITE INSPECTION ALONG WITH DALE GRAMZA OF NATURE'S WAY. WE COLLECTED A PRODUCT SAMPLE FROM THE UST ON SITE TO BE ANALYZED FOR DOH 310-13. IT WAS TAKEN FROM 15,000 GALLON FUEL OIL REGISTERED UST FURTHEST NORTH. DALE HAD ALREADY TAKEN A SAMPLE FROM THE OTHER UST ON HIS LAST INSPECTION. THE REASON FOR THE SAMPLES IS TO TRY TO COMPARE PRODUCT WITH THE OIL FOUND IN THE WELLS THAT HAD BEEN INSTALLED IN BEDROCK BY NATURE'S WAY. DALE GRAMZA'S LAST INSPECTION REVEALED THAT TWO FEET OF PRODUCT IS PRESENT IN THESE WELLS. MR. GRAMZA BELIEVES THAT THE SOURCE MAY BE THESE UST'S. MET DAN TREDO ON SITE. HE IS PLACING JUNK VEHICLES IN THE BUILDING AND MAY BE DUMPING FLUIDS. ADDITIONAL BEDROCK WELLS WILL BE INSTALLED NEXT WEEK TO DETERMINE THE SOURCE OF THE NEWLY DISCOVERED PRODUCT IN THE WELLS. THIS WILL BE DONE ONCE THE OWNERS ARE CONTACTED. 01/20/03 JFO ON SITE MET WITH DALE G OF NATURE'S WAY. THEY ARE AT APPROX 8' ON THE FIRST WELL. NO PRODUCT YET. 01/23/03 JFO CALL FROM DALE GRAMZA OF NATURE'S WAY. THEY WILL NOT BE ON SITE TODAY OR TOMORROW. HE SAID WORK WILL RESUME ON MONDAY JAN 27. 1/28/03 FG SITE INSPECTION. NATURE'S WAY ON SITE CONTINUING BEDROCK WELLS. SO FAR, 5 WELLS HAVE BEEN INSTALLED. 4 OF THE WELLS SHOWED SIGNS OF PETROLEUM ON THE BEDROCK. ADDITIONAL WELLS WILL BE INSTALLED TO DETERMINE THE EXTENT OF THE CONTAMINATION. 2/4/03 RECD THE RESULTS FROM THE SAMPLE COLLECTED FROM THE OTHER UST ON SITE. THE RESULTS SHOW THAT FUEL OIL #2 IS PRESENT. 2/4/03 MARIO PUGLIESE REQUESTED THAT THIS OFFICE FAX HIM THE MOST RECENT LETTERS THAT WERE SENT TO HIM. HE RECEIVED OUR LETTERS AND IS RESPONDING BY THIS CALL. HE DOES NOT FEEL HE IS RESPONSIBLE FOR THE WORK THAT IS NECESSARY ON SITE AND WILL NOT SPEND ANY ADDITIONAL MONEY ON CLEANUP BECAUSE HE DOESN'T HAVE IT. HE REQUESTED THE NAME AND NUMBER OF VIBRATECH AND WILL CALL THEM. HE SAID HE HAD AN AGREEMENT WITH THEM PRIOR TO HIS PURCHASE OF THE PROPERTY. 1/20/04 FG CALLED VIBRATECH AT 937-6600. THE NUMBER WAS TRANSFERRED TO HORSCHEL BROS IN SPRINGVILLE. THEY SAID THAT VIBRATECH IS IN BANKRUPTCY AND THE ATTORNEY FOR THE BANKRUPTCY IS RING. LEGAL HAS REQUESTED THAT I WAIT FOR THAT ACTION TO BE RESOLVED BEFORE I PROCEED WITH ANYTHING ON THE SPILLS SIDE. 6/9/05 SPILL SITE REFERRED TO THE LONG TERM REMEDIATION GROUP. SPILL SITE IS CLOSED. SPILL FILE GIVEN TO LONG TERM. 06/17/06 (CRS) Marty Doster and myself met on-site with Kevin Mathies and Joe Consentino (both with EPA). EPA was completing a walk through of the building to determine if hazardous materials may exists within the building. Joe Consentino outlined the following potential issues in a follow-up e-mail: On site observations indicate a need to conduct a comprehensive sampling investigation to confirm or dispel the presence of hazardous waste and/or hazardous substances at the site. Substances believed present include; mercury (switches, bulbs and vapor lamps), asbestos (pipe and boiler wrap), petroleum hydrocarbons, oils and greases, PCB ballast on old fluorescent lights and possible peeling lead paint. Several drums(55 gallon) and smaller containers were located throughout the site buildings will require sampling. In addition, wooden block floors, sumps and drains appear heavily contaminated and need to be investigated. 06/08/06 RMC/FILE. SITE ACTIVE UNDER CHAD STANISZEWSKI. 06/08/06 (CRS) Unrestricted site access granted by Mario Pugliese's attorney, Steven Cohen, in a letter to the AG dated May 7, 2006. DEC received notification that access was granted in a letter from the AG's office dated May 22, 2006. 06/15/06 (CRS) Cut existing EPA chains on two access gates and placed a new lock on the chains (in addition to the EPA locks which already existed). DEC now has access to the site via two gates: the eastern most gate on E. Delevan and the eastern most gate on Northland Drive. 06/19/06 (CRS) Met on-site with Gary House and Brian Hutzler of OpTech Environmental Services to access removal of the two fuel oil tanks on the east side of the building. Approximately 2-3 feet of product in each tank. Bottom of tanks appear to be approximately 10-12 feet below ground. Also, informed Op-Tech that we would like product removed from all existing wells that currently contain product ((6) wells total MW6, MW1-02, MW3-02, MW4-02, MW5-02 and MW8-03). OpTech indicated they should be able to mobilize in a couple of weeks. 08/04/06 - 08/10/06 (CRS) Optech on-site to clean the two underground No. 6 fuel oil tanks. The fuel oil in each tank was removed with a vac. truck (the oil in the southern tank was heated with a boiler/enclosed steam pipe for (3) days to thin the oil prior to removal). The tanks were swept with No. 2 fuel oil to remove residual oil on the tank walls, pressure washed and wiped with adsorbent pads. The tanks were cleaned in place. The northern tank was excavated and removed from the ground. The sand bedding around the tank was generally not visually impacted, however, when the bedding material was removed from the excavation, oil began seeping out of the bedrock. It is not believed that the oil seeping from the bedrock originated from the north tank. The tank was in good condition with no holes observed. Additional investigation is necessary.

Testing on the oil leaking from the bedrock identified the oil as #6 fuel. The southern tank was not removed due to its proximity to a smoke stack. Optech was concerned that removal of the tank may undermine the stability of the stack. The south tank was left in place, empty. 02/14/14 (CRS) Site continues to be investigated under the Superfund program to address historic TCE contamination. Additional spills investigation of on-site oil anticipated following Superfund work. 6/9/16 NO FURTHER WORK WILL TAKE PLACE UNDER THIS SPILL. ALL WORK IS BEING CONDUCTED UNDER THE HAZARDOUS WASTE SITE 915165. ALL FOLLOWUP WILL BE UNDER THAT SITE NUMBER. THIS SPILL IS CLOSED WITH NO FURTHER WORK REQUIRE."

Site Class Desc (Web):			

Site Class Desc: This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into

compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.

Assess DOH: Remedial activities to address soil contamination conducted at the site and at some nearby off-site properties have effectively reduced the potential for exposure to site-related contaminants. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Description:

Location: The Diarsenol Co., Kingsley Park site is an approximately 2.216-acre site located in a residential neighborhood on Kingsley Street in the City of Buffalo, Erie County. Site Features: The site is a flat, grass covered lot with no buildings. Fencing surrounds much of the site. Current Zoning and Land Use: The site is currently a park owned by the City of Buffalo. Past Use of the Site: The Diarsenol Company occupied the property on Kingsley Street adjacent to the site starting in about 1900. Diarsenol manufactured medications containing arsenic at their facility from the early 1900s until the 1940s. They reportedly used this site for disposal of waste materials from their plant. The site was occupied by various owners from the 1940s until 1967, when it was acquired by the City of Buffalo. The site has been used as a public park and playground since 1972. Site Geology and Hydrology: The Site is currently covered with topsoil overlying clean fill and native clay. Minimal shallow-goundwater contamination is still present in an area proximal to the groundwater collection system.

Assessment:

Remediation at the Site is complete. Prior to remediation, the primary contaminant of concern was arsenic in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted-residential use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Description:

City of Buffalo applied to NYS Environmental Restoration Program in October 1997 to investigate the property. The City withdrew the application in February 1999. No further information on site is available.

Site Name: Western New York Workforce Training Center
Site Name (Web): Western New York Workforce Training Center
Site name (GIS): Western New York Workforce Training Center
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc:
Assess DOH: Measures are in place to properly manage human exposures to residual site contaminants.
Description:

Location: The Western New York Workforce Training Center is an 8.548-acre site located in an urban area at 683 Northland Avenue in the City of Buffalo, Erie County. The site is bounded by Northland Avenue to the north, a railroad spur to the south and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Assess DOH: Measures are in place to properly manage human exposures to residual site contaminants.
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Description:

Location: The Western New York Workforce Training Center is an 8.548-acre site located in an urban area at 683 Northland Avenue in the City of Buffalo, Erie County. The site is bounded by Northland Avenue to the north, a railroad spur to the south and commercial/industrial properties to the east and west. Site Features: The site is mostly flat and includes an approximately 235,000 square foot building complex. The building complex consists of a four-story office area along Northland Avenue, a series of connecting manufacturing spaces, and a detached one-story garage. Areas not covered by buildings are either paved or covered by grass and other small vegetation. Current Zoning and Land Use: The site and adjacent parcels are zoned for industrial use. The site is partially redeveloped as the WNY Workforce Training Center in the northern portion of the building, with portion of the remaining building occupied by Buffalo Manufacturing Works. The surrounding area includes commercial, industrial, and residential uses. The nearest residential property is located approximately 175 feet north of the site. Past Use of the Site: The site was developed as a machine and tool works facility beginning in approximately 1911. The facility used hydraulic equipment, electrical equipment, and other industrial equipment that led to the present site contamination. The building has had several additions and upgrades since its initial construction. The property was most recently used for storage until it was purchased by the current owner in 2015. Site Geology and Hydrogeology: Site overburden contains native soil and fill material from the ground surface to depths of 2 to 12 feet below ground surface. The fill generally consists of silt, sand, and gravel with a mixture of crushed stone, yellow and red brick, coal, glass, slag, ash, metal fragments, and wood. Native soil, where present, typically consists of brown silty clay and is directly on top of bedrock. Limestone bedrock is present at depths ranging from 2 feet to 12 feet below ground surface. Groundwater was observed in bedrock at depths ranging from approximately 9 feet to 12 feet below ground surface. Groundwater flow is to the south and southwest.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals in soil and trichloroethylene in soil vapor. Additionally, petroleum product (hydraulic oil) is present in some areas of the on-site bedrock. Remedial actions have successfully achieved site specific soil cleanup objectives for commercial use. Residual contamination in the soil, bedrock, and soil vapor is being managed under a Site Management Plan

Q. 7: unknown
Q. 8: unknown
Q. 9: unknown
Q. 10: unknown
Q. 11: unknown
Q. 12:
Q. 13:
Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc:
Assess DOH: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Data Source:
Description:

Location: The 664-690 Northland Avenue site is a 1.5-acre site located in an urban area of the City of Buffalo. The site is composed of the southern portions of 664 and 688 Northland Avenue and the entire 690 Northland Avenue properties. Site Features: the site is flat and is a paved parking lot. The site is bisected by Schauf Avenue. Residential properties are immediately adjacent to, and continue north of the site. East, south, and west of the site is a mix of commercial and former industrial buildings. Current Zoning and Land Use: the site is currently used as a paved parking lot and is zoned for commercial use. Past Use of the Site: The site was previously owned by Niagara Machine and Tool, and appears to have been used for employee parking. Other information regarding the former use of the site is unknown. The site is currently owned by NORDEL II LLC. It is anticipated that the site will used as parking for the Western New York Workforce Training Center, directly south of the site, for the foreseeable future. Site Geology and Hydrogeology: Based on other investigations conducted surrounding the site, the overburden soil is expected to be either fill, brown silt/clay, or a mix of the two. Limestone bedrock is likely shallow, being 2 to 3 feet below ground surface. Groundwater is likely present in the bedrock, flowing to the southwest.

Assessment:

Elevated concentrations of trichloroethene (TCE) have been detected in soil vapor and sub-slab soil vapor samples from adjacent sites. Soil vapor samples were collected at 5 locations below the new parking lot pavement in October 2018 and analyzed by EPA Method TO-15. TCE concentrations ranged from non-detect (at 0.19 µg/m3) to non-detect (12 µg/m3). TCE was only detected at one location with a concentration of 0.27 µg/m3. Methyl-ethyl-ketone (MEK) (aka 2-butanone) was also detected, ranging from 420 µg/m3 to 4500 µg/m3. Four of the five samples were qualified as exceeding the calibration range for MEK. The elevated detections of MEK appear to anomalous given the low concentrations reported for other compounds. Based on the investigation completed to date, the site does not pose a significant threat to human health or the environment.

Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc:
Assess DOH: The site is fenced so access is limited. However, persons who enter the site could contact contaminants in the soil by walking on the soil, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site.
Description:

Location: The Jefferson Avenue Apartments site is a 1.57-acre site located in a highly developed residential and commercial area of the City of Buffalo,

Erie County, New York. The site is bordered by Northampton Street to the north, Dodge Street to the south, residential properties to the west, and Jefferson Avenue to the east. Southampton Street bisects the Site. Site Features: The site is currently unoccupied, but is being redeveloped for mixed-use with commercial offices on the first floor and apartments above. The ground surface is generally flat and typified by grass or hard fill material. Some trees and small vegetation are present along the western site boundary. Current Zoning and Land Use: The site is currently being redeveloped and is zoned for mixed use. Past Use of the Site: From the late 1800s until the early 2000s portions of the site included residential and various commercial uses. Past commercial uses include automotive repair, a car dealership service department, trucking operations, paints and varnish/oils storage, and sheet metal and machine shop operations. Site Geology and Hydrogeology: Near surface soils consist of non-native fill overlaying native lean clay or sandy clay soil. The non-native fill material is present at depths ranging between 1 to 4.5 feet below ground surface and consists of black fines, silt, sand, ash/cinders, brick/wood fragments, and gravel. Fill material was removed from the site during remedial action and was replaced with clean fill allowing for unrestricted use. Groundwater flow is to the north, likely towards Scajaquada Creek. Local groundwater flow, however, may be influenced by subsurface features, such as excavations, utilities, and localized fill conditions. Groundwater has been encountered at depths ranging between 8 to 11 feet below ground surface.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were semi-volatile organic compounds (SVOCs) and metals in on-site fill. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use.

Reference: If a respondent indicated that the facility used/stored/disposed PFOA/PFOS substances, it does not necessarily mean that there is an environmental/public health concern associated with that facility. Also, if a respondent indicated that they currently/formerly used, stored, disposed of, or released Class B firefighting foam it does not necessarily mean that the foam contains/contained PFOA/PFOS since many Class B foams do not contain these substances. DEC is in the process of reviewing/evaluating the returned surveys to determine if additional follow-up or study is needed.
Return rate: 91 surveys were sent to facilities; 90 were returned completed as of June 1, 2017.
Questions 1 & 2 relate to name and address; questions 3-5 relate to facility ownership.
Q. 6: Is any Class B fire suppression foam currently stored and/or used at the facility?
Q. 7: Has any Class B fire suppression foam ever been stored and/or used at the facility?
Q. 8: Has Class B fire suppression foam ever been used for training purposes at the facility?
Q. 9: Has Class B fire suppression foam ever been used for firefighting or other emergency response purposes at the facility?
Q. 10: Has the facility ever experienced a spill or leak of Class B fire suppression foam?
Q. 11: Has your facility ever been responsible for the use of Class B fire suppression foam at a location other than the facility (i.e. offsite training, emergency response, or spill)?

Site Name: 1200 Jefferson Avenue Site
Site Name (Web): 1200 Jefferson Avenue Site
Site name (GIS): 1200 Jefferson Avenue Site
Site Class Desc (Web): Active: The classification assigned to a non-registry site in any remedial program where work is underway and not yet complete (i. e., Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program and RCRA Corrective action Program sites). This may be used for Manufactured Gas Plant sites or those being remediated under an EPA Cooperative Agreement.
Site Class Desc:
Assess DOH: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.
Description:

Location: The 1200 Jefferson Avenue site is a 0.93-acre site located in a highly developed mixed-use residential and commercial area at 122 Jefferson Avenue in the City of Buffalo, Erie County. The site is bordered by Eaton Street to the north, occupied and vacant residential properties to the west, Northampton Street to the south and Jefferson Avenue to the east. Site Features: The site currently consists of an existing building, asphalt-gravel parking along the southwestern boundary and a vacant grassy area in the northern portion. Foundation walls are present in the northern vacant portion of the site, suggesting former buildings in this area. Current Zoning and Land Use: The current zoning for the site is N-3E and N-3R which are defined as Neighborhood Center: mixed-use commercial areas at a neighborhood scale and General Residential: residential areas with a mix of housing types and existing commercial uses, typically located on corner lots. The current use of the existing commercial building includes maintenance warehouse space, religious, transportation service and repair; and, vacant commercial storefronts/office space. Past Use of the Site: Based on the historic records, the site was utilized for various commercial operations starting in the late 1890s. Individual buildings on the site from at least 1893 through at least 1926 housed operations such as paint shops, sheet metal works, furniture repair, a blacksmith, a coal, wood and hay company, and other commercial operations. The original portion of the existing building was built in 1926 with subsequent additions. The existing building was used for laundry/dry cleaning operations from approximately 1935 until 2010, as well as multiple automotive service operations, including repair, manufacturing/fabrication, and painting from at least 1926 through at least 1950. Multiple underground storage tanks (USTs) have been identified on-site. The historic use of the site as a laundry/dry cleaning and automotive repair facility has impacted the site with VOCs and metals contamination. Site Geology and Hydrogeology: Previous investigations have identified fill material on site ranging in depth from 0-10 feet below ground surface. Regional groundwater appears to flow north towards Scajaquada Creek, located approximately 1.10-miles from the site. Local groundwater flow, however, may be influenced by subsurface features, such as foundations and utilities, and localized fill conditions.

Assessment:

Based on information provided in the BCP Application, the on-site soil and groundwater has been contaminated with petroleum products and/or tetrachloroethene related past operations at the site. The full nature and extent of the contamination will be determined as part of the BCP Remedial Investigation.

Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Site Class Desc:

Assess DOH: As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Data Source:

Assessment:

Information submitted with the June 2019 BCP application for 1200 Jefferson Avenue Site (#C915346) indicate that soil and groundwater on the 1200 Jefferson Avenue parcel are impacted with petroleum products and tetrachloroethene (and its breakdown products). A second BCP application was received in March 2020. Delineation of the nature and extent of contamination at the site will resume under the BCP, #C915346.

Description:

Location: The Former Pendrick Laundry Site is a 0.406-acre site located in an urban area of the City of Buffalo. The site is bound by vacant properties and Eaton Street to the north, Jefferson Avenue to the east, Northampton Street to the south, and residential properties to the west. Site Features: The site currently consists a building, with asphalt-gravel parking surrounding the building on the south and west sides. Current Zoning and Land Use: The site has most recently been used for maintenance warehouse space, religious, transportation service and repair, and vacant commercial storefronts/office space. The site is zoned by the Buffalo Green Code (January 2017) as N-3E (mixed-use commercial) and N-3R (residential with existing commercial). The surrounding properties are a mix of commercial and residential uses, with residential areas immediately adjacent to the site. Past Use of the Site: The site has included numerous commercial operations from the late 1890s until the mid 2010s. The original portion of the existing building was built in 1926 and involved operations such as laundry/dry cleaning, from at least 1935 through at least 2010, and automotive service operations (repair, manufacturing/fabrication, and painting) from at least 1926 through at least 1950. Multiple underground storage tanks (USTs) have been located on-site. In 1993 during the removal of two USTs contaminated soil was encountered and removed under Spill 9305238. During this time spill records also indicate that an 8,000 gallon #6 fuel-oil UST was abandoned below the building by filling with concrete. A complete BCP application was submitted for the 1200 Jefferson Avenue Site (#C915346) site was submitted in June 2019. The application indicated that soil and groundwater are impacted with petroleum and tetrachloroethene contamination. The BCP application was withdrawn on November 7, 2019, and the DEC subsequently created this site to investigate the contamination identified in the BCP application. A new BCP application was submitted in March 2020 to investigate the impacts at the site. An agreement was signed in June 2020 and the full investigation of contamination at the site will be completed in the Brownfield Cleanup Program as site number C915346. Site Geology and Hydrogeology: Previous investigations have identified fill material on-site ranging in depth from 0-10 feet below ground surface (fbgs). Underlying soil is typically a red-brown to tan sandy clay. Regional groundwater appears to flow north towards Scajaquada Creek located approximately 1.10 miles from the site. Local groundwater flow, however, may be influenced by subsurface features, such as foundations and utilities, and localized fill conditions.

Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Description:

The Otis Elevator site is located at 230 Grider Street in the City of Buffalo, Erie County. The site was operated by the US Army as the Buffalo Elevator Ordinance Plant from 1942 to 1946. During that time the plant reportedly received spent foundry sand molds.

Assessment:

In 1983 the Untied States Geological Survey (USGS) performed eight test borings on the site. Seven of the borings hit refusal at three feet below grade. A soil sample taken from the eighth test boring and was analyzed for the presence of phenolic compounds. No phenol was found. The site was resampled by the USGS in June 1983. One sample was collected was analyzed for organic compounds. No organic compounds were detected. A Phase I investigation for this site has been completed. There are no indications of hazardous waste disposal at this site.

Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program,

Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc:

Assess DOH: No human exposure to contamination from this site is expected since contaminated soil is either removed or covered and public water serves the area.

Data Source:

Description:

Location: The 858 East Ferry Street site is a 3.32 acre property located in the City of Buffalo. The site is located in an urban area. Site Features: The site is currently a vacant lot. The site is situated on the north side of East Ferry Street and is zoned as commercial/industrial. The site is bordered on the north by a New York Central Railroad embankment and industrial property occupied by International Extruded Products. The True Bethel Baptist Church is located opposite of the site, on the south side of East Ferry Street. TNT Used Autos, a small used car lot, is located to the west of the site. The adjacent properties west of the site are currently zoned commercial/industrial. Current Zoning/Use(s): This site is currently vacant and zoned for industrial use. Historical Use(s): At the adjacent property to the west of 858 E. Ferry Street, now occupied by the used auto lot, the 1939 Sanborn map showed that a Michael Heyman Company operated a zinc and lead smelting and refining facility. Two buildings were once located on the Heyman property; the west building was the foundry and blast furnace, and the east building, nearest the 858 E. Ferry Street site, housed the metal casting facility. A 1958 aerial photo shows a path leading from the Heyman property to the central part of the East Ferry Street site. The location of the Heyman facility adjacent to the site and the path leading onto the site support the past disposal of lead-contaminated ash in this location. Under the Environmental Restoration Program (ERP), the City of Buffalo completed an investigation in 1997-1998. The results from this investigation showed significant lead contamination in soil. Based on the results of this investigation, a ROD was signed by NYSDEC in March 1999. The selected remedy included the excavation and off-site disposal of hazardous waste and contaminated soil. The ROD also stated that the remedy would be deferred until further investigation is conducted to the west of the site. Since extensive off-site contamination was found the NYSDEC conducted the additional off-site investigation and completed remediation of the site under the State Superfund program. The site is currently considered as a single operable unit. An additional investigation was completed in 2001 by the NYSDEC at adjacent properties and the results indicated that the soil is contaminated with lead on adjacent properties. The March 1999 ROD was amended in August 2005 based on a significant increase in volume of lead contaminated soil. The amended remedy included the excavation of surface and subsurface contaminated soil from the site and disposal to a permitted landfill to achieve a clean up goal for unrestricted future use and the excavation of contaminated soil from off-site properties and disposal to a permitted landfill to achieve a clean up goal for industrial/commercial use which is consistent with the current zoning. The remedial design of the amended remedy was completed in February 2006. The remedial action completed in 2007 at the site and off-site properties removed the lead-contaminated soils from surface and subsurface. The excavated soils were treated on-site and disposed appropriately in an off-site landfill. Since the contaminated soils were removed the groundwater contamination was expected to decrease. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, the site can be delisted and groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. The process of delisting the site has been completed. The site will be designated as 'C' which refers to as completed remediation. No monitoring or institutional controls are required. Site Geology and Hydrogeology: The overburden deposits in the region have been mapped as lake silts and clays. The thickness of the overburden at the study area varies from approximately 8.4 feet to 17.5 feet. Beneath the overburden deposits, the bedrock consists of the Middle Devonian age Onondaga Limestone. The primary hydrogeologic unit identified beneath the study area is the unconfined watertable aquifer present in the limestone of the Onondaga Formation. However, groundwater is present in the overburden and is found primarily in the ash type fill material and in the backfilled excavation of the Scajaquada Creek Drain. The water in the overburden is reportedly connected to the bedrock groundwater. Groundwater generally flows toward the Scajaquada Creek Drain.

Assessment:

Nature and Extent of Contamination: Prior to Remediation: Based on the results from investigations conducted at the site the lead-contaminated soils found at the on-site and off-site areas were located near and over the top of the covered Scajaquada Creek drain. The highest concentration of total lead detected in the surface soil was 11,500 ppm, which was found beneath a pile of gray ash. The concentrations found in the subsurface soil were as high as 28,500 ppm lead. There was a potential for the contamination from the soil to migrate to Creek Drain and the groundwater. During the investigation groundwater samples were collected from the site and off-site. Total lead was detected at a concentration of 400 µg/l in the groundwater sample collected from the well located on the 856 East Ferry Street property. The sample from this well was the only sample that reported lead concentrations exceeding the NYSDEC groundwater standard. The remaining groundwater samples analyzed have detected total lead at or below groundwater standard. Post-Remediation: As stated in the amended Record of Decision (ROD), the remedial action completed in 2007 at the on-site and off-site properties removed lead contaminated soils from surface and subsurface to a clean up goal of 400 ppm of lead at the site and 1000 ppm of lead at off-site properties. As stated in the amended ROD, the goal of remediating the site to unrestricted future was achieved by implementing the remedy. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. Currently the site declassified as 'C'' indicating that the remediation is completed at the site and no future monitoring of the site is required.

Site Name (Web): East Ferry Street
Site Name (GIS): East Ferry Street
Site Class Desc:
Site Class Desc (Web): No Further Action at this Time: Sites are given a classification of "N" when:

a. the investigation and evaluation of a Class P site results in a determination that contamination at the site does not warrant placing the site on the Registry or it is being addressed under a brownfield program;

b. a site was in a brownfield program (BCP, ERP or VCP) or other non-Registry program, remediation was not completed, and the site did not otherwise qualify for listing on the Registry. As an example, this occurs when a volunteer begins a brownfield project and then for economic or other reasons, determines they cannot complete the work and the brownfield project is terminated. If the contamination at the brownfield site qualifies it for placement on the Registry, the Department acts to do so. If the site re-enters a brownfield program, it can be reclassified to Class A (active) to indicate that work has recommenced;

c. a site was identified simply as the location(s) where a drum(s) or other discrete waste was at one time present and subsequently removed by DEC or others and, based on the resulting conditions, no need for additional work was apparent; or

d. an application to the BCP, ERP or VCP was submitted, and was then withdrawn or terminated before any actions were taken to investigate or remediate the site.

Assess DOH:
Description:

Location: The 858 East Ferry Street site is a 3.32 acre property located in the City of Buffalo. The site is located in an urban area. Site Features: The site is currently a vacant lot. The site is situated on the north side of East Ferry Street and is zoned as commercial/industrial. The site is bordered on the north by a New York Central Railroad embankment and industrial property occupied by International Extruded Products. The True Bethel Baptist Church is located opposite of the site, on the south side of East Ferry Street. TNT Used Autos, a small used car lot, is located to the west of the site. The adjacent properties west of the site are currently zoned commercial/industrial. Current Zoning/Use(s): This site is currently vacant and zoned for industrial use. Historical Use(s): At the adjacent property to the west of 858 E. Ferry Street, now occupied by the used auto lot, the 1939 Sanborn map showed that a Michael Heyman Company operated a zinc and lead smelting and refining facility. Two buildings were once located on the Heyman property; the west building was the foundry and blast furnace, and the east building, nearest the 858 E. Ferry Street site, housed the metal casting facility. A 1958 aerial photo shows a path leading from the Heyman property to the central part of the East Ferry Street site. The location of the Heyman facility adjacent to the site and the path leading onto the site support the past disposal of lead-contaminated ash in this location. Under the Environmental Restoration Program (ERP), the City of Buffalo completed an investigation in 1997-1998. The results from this investigation showed significant lead contamination in soil. Based on the results of this investigation, a ROD was signed by NYSDEC in March 1999. The selected remedy included the excavation and off-site disposal of hazardous waste and contaminated soil. The ROD also stated that the remedy would be deferred until

further investigation is conducted to the west of the site. Since extensive off-site contamination was found the NYSDEC conducted the additional off-site investigation and completed remediation of the site under the State Superfund program. The site is currently considered as a single operable unit. An additional investigation was completed in 2001 by the NYSDEC at adjacent properties and the results indicated that the soil is contaminated with lead on adjacent properties. The March 1999 ROD was amended in August 2005 based on a significant increase in volume of lead contaminated soil. The amended remedy included the excavation of surface and subsurface contaminated soil from the site and disposal to a permitted landfill to achieve a clean up goal for unrestricted future use and the excavation of contaminated soil from off-site properties and disposal to a permitted landfill to achieve a clean up goal for industrial/commercial use which is consistent with the current zoning. The remedial design of the amended remedy was completed in February 2006. The remedial action completed in 2007 at the site and off-site properties removed the lead-contaminated soils from surface and subsurface. The excavated soils were treated on-site and disposed appropriately in an off-site landfill. Since the contaminated soils were removed the groundwater contamination was expected to decrease. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, the site can be delisted and groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. Operable Units: Site Geology and Hydrogeology: The overburden deposits in the region have been mapped as lake silts and clays. The thickness of the overburden at the study area varies from approximately 8.4 feet to 17.5 feet. Beneath the overburden deposits, the bedrock consists of the Middle Devonian age Onondaga Limestone. The primary hydrogeologic unit identified beneath the study area is the unconfined watertable aquifer present in the limestone of the Onondaga Formation. However, groundwater is present in the overburden and is found primarily in the ash type fill material and in the backfilled excavation of the Scajaquada Creek Drain. The water in the overburden is reportedly connected to the bedrock groundwater. Groundwater generally flows toward the Scajaquada Creek Drain.

Assessment:

Nature and Extent of Contamination: Based on the results from investigations conducted at the site the lead-contaminated soils found at the on-site and off-site areas were located near and over the top of the covered Scajaquada Creek drain. The highest concentration of total lead detected in the surface soil was 11,500 ppm, which was found beneath a pile of gray ash. The concentrations found in the subsurface soil were as high as 28,500 ppm lead. There was a potential for the contamination from the soil to migrate to Creek Drain and the groundwater. During the investigation groundwater samples were collected from the site and off-site. Total lead was detected at a concentration of 400 µg/l in the groundwater sample collected from the well located on the 856 East Ferry Street property. The sample from this well was the only sample that reported lead concentrations exceeding the NYSDEC groundwater standard. The remaining groundwater samples analyzed have detected total lead at or below groundwater standard. As stated in the amended Record of Decision (ROD), the remedial action completed in 2007 at the on-site and off-site properties removed lead contaminated soils from surface and subsurface to a clean up goal of 400 ppm of lead at the site and 1000 ppm of lead at off-site properties. As stated in the amended ROD, the goal of remediating the site to unrestricted future was achieved by implementing the remedy. After the successful completion of the remedial action at the site, a groundwater sampling event was conducted in May 2009. The results indicated that the on-site wells did not show lead contamination above groundwater standards, which was consistent with the sampling event during the investigation. Therefore, groundwater at the site need not be monitored in the future. Currently public water supply is available in this area. Special Resources Impacted/Threatened: Significant Threat:

Description:

Location: The Mt. Olive Senior Manor site is an approximately 1.3-acre site located in a highly developed residential, commercial and industrial area at 703 East Delavan Avenue in the City of Buffalo, Erie County. It is at the southeast corner of East Delavan and Sheridan Avenues. The site is bordered by the remaining portion of 703 East Delavan to the north, commercial and industrial properties to the south, an industrial property to the west and Sheridan Avenue to the east. Site Features: The site currently consists of a grass covered athletic field and a small portion of an adjacent asphalt parking lot to the north. Zoning and Land Use: The current zoning for the Site is N-3R (Residential), defined as moderately compact residential blocks, which occasionally include small mixed-use buildings. The site is currently a grass covered athletic field. The redevelopment plan for the site is a 3-story affordable housing development for seniors, consistent with the zoning assigned to the site. Past Use of the Site: The 703 East Delavan parcel which includes this site has historically been developed with a church building, an associated parking lot and athletic field. Historic fuel oil and gasoline storage tanks were identified in close proximity to the site along with historic automobile repair and rug/furniture cleaning, possibly with dry-cleaning operations, which were identified adjacent to the site. Impacted fill materials containing semi-volatile organic compounds (SVOCs)and metals were identified at levels exceeding Soil Cleanup Objectives (SCOs)and may be associated with the import of historic fill material. Miscellaneous urban fill materials from unknown sources were observed in the subsurface across the site. Site Geology and Hydrogeology: The site is located within the Lake Erie-Niagara River major drainage basin, which is typified by little topographic relief that gently slopes westward towards Lake Erie and the Niagara River, except in the immediate vicinity of major drainage ways. According to the United States Department of Agriculture (USDA) Web soil survey, site soils are characterized as Urban Land (Ud) and Urban Land Wassaic Complex (Ux). Soils associated with Urban Land are characterized as miscellaneous areas in which 80% or more of the soil surface is covered by asphalt, concrete, buildings, or other impervious structures. Urban Land Wassaic Complex soils are composed of 60% urban land, 35% Wassaic or similar soils, and 5% minor components. Wassaic Complex soils are classified as well drained with a slope of 0 to 3 percent. Previous investigation identified the site geology as primarily vegetative topsoil cover over varying types of fill materials ranging in depth from 3 inches to 2 feet below ground surface (fbgs). Evidence of fill materials were observed at all test pit locations with the exception of TP-6. Silty sand and/or fine sand were encountered at TP-6, and TP-7, and TP-8 underlying the fill. The site is situated over the Onondaga Formation. The Onondaga Formation is comprised of a limestone of varying texture, from coarse to very finely crystalline, with a dark gray to tan color and chert and fossils within. The unit has an approximate thickness of 150 feet. The depth to bedrock was identified at approximately 1 to 2 fbgs. Regional groundwater is anticipated to flow westerly towards the Niagara River. However, local groundwater flow may be influenced by subsurface features, such as excavations, utilities, and localized fill-conditions. Groundwater was not encountered during previous investigations and is likely present in the underlying bedrock. Additional work is required to investigate groundwater flow direction and quality at the site. Monitoring wells will be installed to assess and characterize groundwater flow patterns and quality during the Remedial Investigation.

Assessment:

Information submitted with the BCP application regarding the environmental condition at the site are currently under review and will be revised as additional information becomes available.

Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Site Class Desc:
Assess DOH: Measures are in place to control the potential for coming in contact with residual contamination remaining at the site.

Description:

Site Location: The 1827 Fillmore Avenue site is an approximately 17.1-acre site located in an urban area at 1827 Fillmore Ave in the City of Buffalo, Erie County. It is bounded by the Kensington Expressway (Route 33) and Buffalo Public School #84 to the north, Erie County Medical Center (ECMC) to the east, Buffalo Public School #89 to the south and Fillmore Avenue to the west. Site Features: The site is mainly vacant land with green areas, asphalt-paved parking lots and roadways. The entire site is enclosed by fence. A portion of the site is used as parking for ECMC. Current Zoning and Land Use: The site is zoned D-C Flex Commercial and is vacant except for a portion of the site being used for parking. Past Use of the Site: From at least 1917 the site was part of a stone quarry which encompassed the entire site and portions of adjacent properties to the east and south. Between the 1940s and the 1950s, the stone quarry was backfilled with sand, gravel, cinders, ash, asphalt, broken concrete, brick, metal debris, wood, glass and ceramics. The Kensington Heights Towers complex was constructed on-site in 1958. The complex consisted of six, seven-story brick apartment buildings, open space, and on-site parking. The site has been vacant since the 1980s. From 2009 to 2014, asbestos was removed from the apartment buildings and by 2018, all six buildings had been demolished. The site contamination is largely attributed to the waste fill materials used to backfill the stone quarry. Site Geology and Hydrogeology: The fill materials extend from the surface to the top of bedrock, varying in depths from 3 to 24 feet. Two soil mounds are located on-site, consisting mainly of topsoil, sandy clay and minimal fill. Groundwater was encountered within the fill material in the central and eastern portions of the site, at depths of approximately 14 to 18 feet, typically within a layer of ash. No groundwater was encountered within the fill in the western portion of the site. Bedrock wells installed in the western portion of the site found groundwater at depths of approximately 20 feet. Groundwater flows in a westerly direction.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals, including arsenic, barium, cadmium, copper, lead, mercury, manganese and sodium, and semi-volatile organic compounds (SVOCs) in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Assess DOH:	Measures are in place to control the potential for coming in contact with residual contamination remaining at the site.		
Site Class Desc (Web):	Complete: The classification used for sites where the Department has determined that remediation has been		

satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc:
Description:

Site Location: The 1827 Fillmore Avenue site is an approximately 17.1-acre site located in an urban area at 1827 Fillmore Ave in the City of Buffalo, Erie County. It is bounded by the Kensington Expressway (Route 33) and Buffalo Public School #84 to the north, Erie County Medical Center (ECMC) to the east, Buffalo Public School #89 to the south and Fillmore Avenue to the west. Site Features: The site is mainly vacant land with green areas, asphalt-paved parking lots and roadways. The entire site is enclosed by fence. A portion of the site is used as parking for ECMC. Current Zoning and Land Use: The site is zoned D-C Flex Commercial and is vacant except for a portion of the site being used for parking. Past Use of the Site: From at least 1917 the site was part of a stone quarry which encompassed the entire site and portions of adjacent properties to the east and south. Between the 1940s and the 1950s, the stone quarry was backfilled with sand, gravel, cinders, ash, asphalt, broken concrete, brick, metal debris, wood, glass and ceramics. The Kensington Heights Towers complex was constructed on-site in 1958. The complex consisted of six, seven-story brick apartment buildings, open space, and on-site parking. The site has been vacant since the 1980s. From 2009 to 2014, asbestos was removed from the apartment buildings and by 2018, all six buildings had been demolished. The site contamination is largely attributed to the waste fill materials used to backfill the stone quarry. Site Geology and Hydrogeology: The fill materials extend from the surface to the top of bedrock, varying in depths from 3 to 24 feet. Two soil mounds are located on-site, consisting mainly of topsoil, sandy clay and minimal fill. Groundwater was encountered within the fill material in the central and eastern portions of the site, at depths of approximately 14 to 18 feet, typically within a layer of ash. No groundwater was encountered within the fill in the western portion of the site. Bedrock wells installed in the western portion of the site found groundwater at depths of approximately 20 feet. Groundwater flows in a westerly direction.

Assessment:

Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were metals, including arsenic, barium, cadmium, copper, lead, mercury, manganese and sodium, and semi-volatile organic compounds (SVOCs) in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Site Class Desc (Web):			
Site Class Desc:	This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.		
Assess DOH:	Since the site is covered by asphalt, buildings, and clean backfill, people will not come in contact with site related soil or groundwater contamination that remains unless they dig below the surface. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. While the remaining extent of volatile organic compounds in soil is limited at the site, there is a process by which volatile organic compounds in soil may move into the soil vapor (air spaces within the soil), and in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Under current conditions and use of the site, soil vapor intrusion is not a concern, however, if use of the site changes from industrial use, the potential for soil vapor intrusion to occur will be evaluated.

Description:			

Location: The 318 Urban Street site is an approximately 2.468-acre site located in a mixed residential/industrial area at 318 Urban Street in the City of Buffalo, Erie County. The site is bounded by residential homes to the north, Urban Street to the south, apartments and a playground to the east, and railroad tracks to the west. A public school is located diagonally across Urban Street to the southeast. Site Features: The site contains a brick/block high bay industrial building. Asphalt pavement borders the northern, eastern and western sides of the building. The remainder of the site is covered in turf grass. The entire parcel is secured with a chain link fence and driveway gate. The western side of the site is bounded by an elevated grade developed for the rail corridor. Current Zoning and Land Use: The site is zoned for Light Industrial use. Past Use of the Site: General Electric Corporation (GE) owned and operated the site from 1921 to 1968. GE used the building as a service shop to repair electrical equipment and transformers and to machine parts. A transformer pit was used for operations which included draining oil from transformers. Pyramid Steel Corporation (a.k.a. Sweeney Steel Service, Corp.) purchased the site in 1985 and used the building as a machine shop and warehouse for steel fabrication and supply. Pyramid vacated the property in the early 2000s. Several industrial tenants have used the building and site intermittently in the ensuing years. Site Geology and Hydrogeology: The surface soils consist primarily of poorly drained silts and clays. Based on the USGS topographic map, there are no surface water bodies within a one-mile radius of the site. The nearest surface water body shown on the map is Scajaquada Creek, which is one and one-half miles northwest of the site. Storm water runoff enters on-site catch basins and is directed through storm drains to a publicly owned combined storm and sanitary sewer on French Street. During normal flow conditions, the flow is discharged to the publicly-owned treatment works (POTW) on Squaw Island. During heavy storms, the combined sewer overflow discharges directly to Scajaquada Creek.

Assessment:

Remediation at the site is complete. Prior to remediation the primary contaminants of concern were PCBs in soil, groundwater and sewer sediments. Remedial activities have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil, groundwater and sewer sediments is being managed under a Site Management Plan.

Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).

Site Class Desc:

Assess DOH: The majority of soil is covered with pavement and buildings and contact with any potentially contaminated soil is not likely. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination.

Description:

Location: The Niagara Mohawk Dewey Ave. Service Station is an approximately 23.00-acre site located in an urban area at 144 Kensington Avenue in the City of Buffalo, Erie County. St. Mary's School for the Deaf borders the site to the west. Site Features: A mechanic shop, several administrative buildings, a fuel island and an employee parking lot are currently located on site. Current Zoning and Land Use: The site is an active National Grid

service center. Past Use of the Site: The site has been used for servicing electrical equipment since the early 1930s. Site Geology and Hydrogeology: Groundwater generally flows to the east across the site.

Assessment:

Remediation at the site is complete. Prior to remediation the primary contaminants of concern were PCBs in soil and groundwater. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination is soil and groundwater is being managed under a Site Management Plan.

Site Class Desc (Web):	Potential: This classification is used for sites where preliminary information indicates that a site may have contamination that makes it eligible for consideration for placement on the Registry of Inactive Hazardous Waste Disposal Sites (commonly referred to as the list of State Superfund Sites). Further information and/or investigation, in the form of a site characterization, is needed to determine if a Class P site qualifies for listing of the site on the Registry. Generally, to qualify for placement on the Registry, there must be evidence that hazardous waste was disposed on the site and that any resulting contamination presents a significant threat (or reasonably foreseeable threat) to public health or the environment. Class P sites are not listed on the Registry and many are eventually found to not qualify for Registry listing. Sites that do not qualify for listing are typically then reclassified to a "Class N" site.
Site Class Desc:	
Assess DOH:	As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

Description:	

Location: The 1542 Main Street site is an approximately 0.27-acre site located in an urban area at 1542 Main Street in the City of Buffalo, Erie County. It

is at the intersection of Main and West Ferry Streets. Site Features: There were two adjoining buildings on the site consisting of two and three story brick, wood and concrete structures. The building were historically mixed commercial and residential use. The smaller building was demolished in 2012 and replaced with a new two story building that was connected to the renovated larger building. Current Zoning and Land Use: The site is located in an N-2C zone, as a "Mixed-Use Center", which allows for commercial use. The connected buildings are used for office space. The surrounding properties are predominately commercial to the north, east, and south with private residences to the west. Past Use of the Site: The demolished smaller building was historically addressed as 958-960 West Ferry Street and had been occupied by a dry-cleaning business. The dry cleaning operations are presumed to be the cause for the site contamination. Site Geology and Hydrogeology: The geology at the Site is generally described as fill materials overlying sandy lean clay and sandy silt. The fill materials consist of miscellaneous sand, intermixed with brick,concrete and cinders. Groundwater was encountered at approximately 6 fbgs during exterior installations and approximately 2 feet below grade surface during installation of the basement borings (i.e.,approximately 7 feet below street grade). Groundwater elevations surveyed in 2009 indicate groundwater flows in a general northeast direction across the Site.

Assessment:

Nature and Extent of Contamination: As part of a property transaction a series of Environmenal Assessments were conducted on the property from 2007 - 2012. Chlorinated Volatile Organic Compounds (cVOCs) were detected at very low concentrations in soil samples, with the majority of analytes detected at estimated concentrations below laboratory detection limits. No cVOCs were detected above Part 375 Unrestricted Use SCOs. On-site groundwater has been impacted by cVOCs, specifically perchloroethylene (PCE) and its chemical breakdown products. PCE is a common dry-cleaning solvent and the groundwater impacts are reasonably attributable to past use of a portion of the site as a dry-cleaning facility. The groundwater impacts were identified west of the buildings beneath an asphalt parking lot(monitoring wells MW-9 through -12), north of the buildings (MW-16) and beneath the buildings (MW-13 and -14). The highest concentration of cVOCs in groundwater was detected in MW-12 (7,845 ug/L total cVOCs), which is located on the southern boundary, west of the buildings. Additional groundwater samples were collected in October 2018 for the analyses of cVOCs. Monitoring wells MW-9, -10, -11 and -12,that had been installed in the asphalt parking lot, could not be found and were most likely paved over. The highest concentration of cVOCs found on site was west of the buildings in MW-17 (8,480 ug/L total cVOCs). Beneath the buildings, total cVOCs concentration was as high as 432 ug/L (MW-14). Remedial actions were taken in 2012, including: - in-situ enhanced bioremediation of VOC impacted groundwater; - implementation of a soil/fill management plan to address potentially impacted soil that may be encountered during Site redevelopment; and, - design and installation of an active sub-slab depressurization (ASD) system to protect the building from potential vapor intrusion of VOCs The potential for the off-site migration of cVOCs has not yet been evaluated.

Site Class Desc (Web):			

Site Class Desc: This classification is assigned to a site that has been properly closed but that requires continued site management consisting of operation, maintenance and/or monitoring. Class 4 is appropriate for a site where remedial construction actions have been completed for all operable units, but the site has not necessarily been brought into

compliance with standards, criteria, or guidance (e.g., a groundwater extraction and treatment system has been installed and is operating properly but groundwater standards have not been achieved yet). The Record of Decision should define the remedial action objectives that need to be achieved during site management. If a Certificate of Completion (CoC) is to be issued for a site, the CoC is issued concurrently with the reclassification.

Assess DOH: Exposures via drinking water are not expected because homes in the area are served by public water and no known private wells exist in the immediate area. Direct contact exposure to site-related contaminants by community members is not expected because the remaining contaminants are located below a paved parking lot and public access to the site is restricted by security guards. A deed restriction is in place to control future digging on the site.

Description:

Location: The Osmose Wood Preserving site is an approximately 0.533-acre site located in a mixed commercial and residential area at 980 Ellicott Street in the City of Buffalo, Erie County. Site Features: The site contains multiple buildings and asphalt parking areas. Current Zoning and Land Use: This site is zoned for industrial manufacturing use and is currently unoccupied. Past Use of the Site: In 1989, underground storage tanks (USTs)at the site used for storage of creosote, No.2 Fuel Oil and other chemicals were found to be leaking. Soil surrounding the tanks was contaminated as a result. Site Geology and Hydrology: The site geology consists of approximately 60 feet of unconsolidated clay, silt, sand and gravel deposits, which is underlain by the Onondaga limestone bedrock. Fill mixed with silt and clay varies up to 5 feet below ground surface (fbgs), followed by low permeability silty clay from 7 to 12 fbgs. This is followed by highly permeable strata of sands and a mix of sands and gravel down to the bedrock. Depth to groundwater varies across the property and with the seasons. The groundwater at the site flows east toward Ellicott Street.

Assessment:

Remediation at the site is complete. Prior to remediation the primary contaminants of concern were polycyclic aromatic hydrocarbons (PAHs) and petroleum hydrocarbons in soil and groundwater. Remedial activities have successfully achieved soil cleanup objectives for commercial use. Residual contamination in soil and groundwater is being managed under a Site Management Plan.

Site Name: Sycamore Village
Site Name (Web): Sycamore Village
Site Name (GIS): Sycamore Village
Site Class Desc:
Site Class Desc (Web): Complete: The classification used for sites where the Department has determined that remediation has been satisfactorily completed under a remedial program (i. e., State Superfund, Brownfield Cleanup Program, Environmental Restoration Program, Voluntary Cleanup Program, and RCRA Corrective Action Program). State Superfund (Registry) sites must have completed all active operation, maintenance, or monitoring requirements before they can be delisted and made class C. Non-registry sites may be made a class C after successful completion of all required construction or after a no further action remedy has been selected by the Department. These sites will be issued a Certificate of Completion (COC), but may still require ongoing maintenance and periodic certification of institutional/engineering controls (IC/ECs).
Assess DOH: The site has been remediated. All the contaminated soil has been excavated and removed from the site. The site was then backfilled with clean soil from an off-site source. The potential exposure routes have been eliminated. Exposures via drinking water are not expected because the area is served with public water and there are no known users of groundwater in the vicinity.

Description:

The site is located in an area currently zoned for residential/commercial use and consisted of a partially developed, partially vacant, one-block parcel located in the City of Buffalo. Surrounding land use include mostly one and two-family residential housing with mixed business/commercial/retail. The former Buffalo Forge plant is located west of the block on the opposite side of Mortimer Street; residential housing and a small auto repair shop are located to the north on Sycamore Street; retail/residential areas are located to the east along Jefferson Avenue; and a church, parking lots and vacant parcels are located to the south of the block across Matthews Street. A large portion of the site was once the location of a soft drink bottling plant which began operations on site sometime between 1915 and 1926. The plant closed in 1984. Street directories listed a sheet metal works at the same address until 2001 when the building was demolished. Past uses for other portions of the site included a cleaning business, auto repair shop, scrap yard and a paint/wallpaper store. Site soil contamination could be associated with fill material found on site or from previous site and near-site (i.e. Buffalo Forge) activities. Previous site investigations included Phase I (2001), Phase II (2002) and Phase III (2002) environmental assessments. A Site Investigation was conducted in 2005 under the Environmental Restoration Program. The SI confirmed earlier findings; soil/fill on site contained elevated concentrations of PAHs and metals. An Interim Remedial Measure was designed to remove the contaminated fill from the site for disposal at a permitted landfill. The IRM construction began in February 2006. Little or no native soils were encountered, the depth to the top of bedrock was only 0.5 to 3.5 feet below the ground surface. By May 2006, all of the soil/fill to the top of bedrock, from across the entire site, had been excacavted and disposed off site. A site investigation/remedial alternatives report and an IRM construction completion report have been completed. A Proposed Remedial Action Plan (PRAP) was issued in September 2006 suggesting No Further Action. Public comments on the PRAP were accepted through November 15,2006. In general, the comments were supportive of the selected remedy. The Record of Decision was issued in December 2006. The site was re-developed into residential housing.

Assessment:

The investigation of the site and adjacent properties identified elevated levels of some metals (lead, mercury, chromium and to a lesser extent cadmium)

and polycyclic aromatic hydrocarbons in the surface and subsurface soils across the property. An IRM to remove the soil/fill from across the entire site was completed in 2006. A total of 18,623 cubic yards of impacted soil/fill materials were disposed of off-site at the Town of Tonawanda (EnSol) Landfill located in Tonawanda, NY. No groundwater was encountered in the overburden. Due to the relatively insoluble nature of the soil/fill contaminants of concern and the absence of overburden or shallow bedrock groundwater, chemical migration via leaching to groundwater was not considered a significant migration pathway. The site has been remediated and no further action is required.

DEC Remark:

"02/08/17 TDJ WENT TO LOCATION AT APPROX. 6:30 AM, WHICH IS THE HAMLIN PARK ELEMENTARY SCHOOL. DECISION WAS MADE BY BUFFALO SCHOOL SYSTEM TO CLOSE SCHOOL DUE TO ODORS IN THE BASEMENT. A LEAK BEGAN DIRECTLY UNDER THE 6,000 GALLON FUEL OIL TANK IN A TOTALLY CONTAINED ROOM IN THE BASEMENT. NRC ENVIRONMENTAL COMPANY WAS ONSITE AND A VAC TRUCK WAS EN-ROUTE TO SUCK UP THE SPILLED FUEL. THE ROOM WHERE IT LEAKED INTO HAD NO DRAINAGE AND THE WALLS WERE COMPLETELY SEALED. THE AMOUNT SPILLED WILL RANGE AROUND 2,000 GALLONS WHEN IT IS EMPTY. LEAK COULD NOT BE STOPPED DUE TO LIQUID ON THE FLOOR UNDER THE TANK. DISPOSAL INFO WILL BE SUBMITTED WHEN VAC TRUCK IS EMPTIED. NO DRAINS NOR WATER WAS AFFECTED AND NO STUDENTS NOR STAFF WERE HARMED. 02/08/17 TDJ WAS CONTACTED BY BUFFALO FIRE DEPARTMENT

AT APPROX. 11:30 AM REGARDING FUEL OIL SHOWING UP AT BSA ON NIAGARA STREET. SUPPOSEDLY AT APPROX 8:00 AM THEY BEGAN TO NOTICE A SHEEN AT THE PLANT AND A FUEL OIL ODOR IN SEWER LINES ON NIAGARA STREET IN THE CITY. CALLER ASKED IF SPILLS HAD ANY SPILLS ONGOING OF WHICH I STATED THE SCHOOL TANK SPILL INTO CONTAINMENT. WE AGREED TO MEET AT THE SCHOOL TO INSPECT CLEANUP OF THE MORNING SPILL. NCR WAS FINISHING THE TANK AREA WHERE THE TANK WAS EMPTY AND THE FLOOR WAS CLEAN. A SUMP OUTSIDE OF THE ROOM WAS FOUND TO CONTAIN FUEL OIL WHICH WAS BEING PUMPED OUT. WHEN WE WENT OUT NEAR THE STREET A SANITARY SEWER LINE WAS OPENED TO FIND A FUEL ODOR AND A SLIGHT FILM ON BOOM PLACED INSIDE LEADING FROM THE SCHOOL. I SPOKE WITH Leslie.SEDITA AT THE BSA AND GAVE CONDITIONS FOUND. BSA PERSONELL WERE SENT TO SITE TO INSPECT. WE INSPECTED THE CONTAINMENT AREA BUT FOUND NO DIRECT LINE TO THE SUMP. ONLY POSSIBLE ENTRY TO SUMP WAS WATER SEEN RUNNING DOWN SUMP WALL ON TANK ROOM SIDE. WATER WAS CLEAR AND NO FUEL STAIN WAS OBSERVED. WATER WAS ADDDED IN TANK ROOM WHICH MAY HAVE CLEARED WALL STAIN. PUMP RUNNING WAS NOT NOTICED DURING THE SPILL TIME BUT IT WAS NOT BEING WATCHED FOR ANY REASON. BSA WORKERS ARRIVED AND WHEN TOLD OF SITUATION STATED THAT AS LONG AS THE TANK WAS EMPTY AND THE ROOM CLEANED THERE WAS NOT MUCH THAT COULD BE DONE EXCEPT TO LET THE CITY LINES FLUSH WITH NATURAL FLOW. THE BSA WILL MONITOR THE LINE TO ENSURE THE CONCENTRATION IS DEMINISHING WITH TIME. CONTACTED BSA AT END OF DAY AND WAS TOLD NO ADDITIONAL SHEEN NOR COMPLAINTS WERE NOTED AND SEPARATE STORM LINE IN SYSTEM SHOWED NO SHEEN AT OUTFALL. AN AMOUNT LOST TO THE SEWER LINE WAS NOT DETERMINED AS THE GUAGE IN THE TANK DID NOT SEEM TO BE WORKING PROPERLY. NRC DID SAY THAT THEY PUMPED A TOTAL OF 600 GALLONS OF FUEL FROM THE TANK ROOM. 02/09/17 TDJ SPOKE WITH LESLIE SEDITA AGAIN AT APPROX 8:30 AM AND WAS INFORMED THAT NO ODORS WERE PRESENT THIS MORNING. WILL CLOSE THE SPILL AS NO FURTHER ACTION WHEN FUEL OIL DISPOSAL SHEET IS COMPLETE. 03/24/17 TDJ RECEIVED DISPOSAL INFO FROM NRC/OP-TECH FOR 800 GALLONS OF DIESEL FUEL PUMPED AND DISPOSED AT COVANTA ENERGY IN NIAGARA FALLS,NY. NO FURTHER ACTION FILE CLOSED TO ELECTRONIC ONLY"

"09/08/16 TDJ ARRIVED AT LOCATION BY REQUEST OF BFD HAZMAT CHIEF TERRY DICKINSON. SLIPPERY MATERIAL WAS COATING A PORTION OF THE ROADWAY FOR WHAT APPEARS TO BE SEVERAL MILES THROUGHOUT THE CITY. A GARBAGE TRUCK FOR THE CITY OF A PRIVATE FIRM WAS SUSPECTED TO BE THE CAUSE. IT DID NOT APPEAR TO BE NORMAL HYDRAULIC OIL BUT WAS MORE OF A VEGETABLE BASED MATERIAL WHICH WAS SLIPPERY IN SPOTS. SPEEDY DRY WAS PLACED AT INTERSECTIONS FOR DRIVER SAFETY. THE SPILL WAS THIN AND SPREAD TO FAR TO SPREAD ABSORBENT ON THE ENTIRE PATH. A CITY SWEEPER WILL COLLECT THE SPREAD SPEEDY DRY LATER IN THE DAY AFTER IT GETS CRUSHED IN BY TRAFFIC. NEWS MEDIA WAS ONSITE. NO ENVIRONMENTAL HARM WAS CAUSED BY SPILLED MATERIAL. 09/09/16 TDJ SPOKE WITH TERRY DICKINSON OF BFD HAZMAT WHO STATED THAT THE CITY HIGHWAY DEPT FOUND A LOANER GARBAGE TRUCK HAD LOST IT'S HYDRAULIC OIL CAUSING THIS SPILL. I INSPECTED THE SITE AND FOUND STREET SWEEPER HAD BEEN ONSITE AND CLEARED THE SPEEDY DRY. THE ROAD WAS STAINED BUT NO SLIPPERY CONDITIONS REMAINED AFTER THE RAIN AND USEAGE BY VEHICULAR TRAVEL. CITY WILL DETERMINE THE TYPE OF HYDRAULIC OIL THE LOANER TRUCK HAD IN IT. NO FURTHER ACTION FILE CLOSED TO ELECTRONIC ONLY"

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

National Priority List - Proposed: PROPOSED NPL

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Jul 26, 2022

Deleted NPL: DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the SEMS GIS/REST file layer obtained from EPA's Facility Registry Service.

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

Federal Institutional Controls- ICs: FED INST

This list of Institutional controls (ICs) is provided by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents issued in fiscal years 1982-2020 for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

RE: CITY DIRECTORY RESEARCH
Kensington Expressway
Buffalo,NY

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

Wells from NWIS — **FED USGS**

The U.S. Geological Survey's National Water Information System (NWIS) is the nation's principal repository of water resources data. The NWIS includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIW dataset contains select Site Types from the overall NWIS Sites data, limited to the following Group Site Types only: Groundwater Group Site Types: Well, Collector or Ranney type well, Hyporheic-zone well,

Interconnected Wells, Multiple wells; Spring Group Site Type: Spring; and Other Group Site Types: Aggregate groundwater use, Cistern.

State Sources

Oil and Gas Wells **OGW**

The Division of Mineral Resources maintains a data management system on wells regulated under the Oil, Gas and Solution Mining Law (OGSML). To assist the Division in the regulation of wells subject to the OGSML, a database of the wells was created in the early 1980's and significantly upgraded in 1998 by the adoption of the Risk Based Data Management System. This system provides information on well ownership, well owners and operators, registered driller, pluggers and companies that provide financial security instruments.

Regulatory Freshwater Wetlands **WETLAND**

The Regulatory Freshwater Wetlands data are a set of ARC/INFO coverages composed of polygonal and linear features. Coverages are based on official New York State Freshwater Wetlands Maps as described in Article 24-0301 of the Environmental Conservation Law. Coverages are not, however, a legal substitute for the official maps. Coverages are available on a county basis for all areas of New York State outside the Adirondack Park. This dataset is provided by New York State Department of Environmental Conservation.

Underground Injection Control Wells **UIC**

A well permit is required from the Division of Mineral Resources for any brine disposal well deeper than 500 feet. This includes any operation to drill, deepen, plug back or convert a well. Regardless of well depth, the NYSDEC Division of Water must be contacted for a determination of whether a SPDES permit is necessary to operate any brine disposal well.

Water Wells Database **WATER WELLS**

The New York State Department of Environmental Conservation (DEC) Bureau of Water Resource Management works to protect, manage, and conserve New York State's groundwater and surface water supply sources, develop management strategies to enhance and protect these waters, and protect both the groundwater and surface water quality in the New York City Watershed and other major watersheds. This dataset does not include information on wells located in Nassau, Suffolk, Kings, and Queens counties.
