

Air Quality Analysis Results

- The 2027 and 2047 calculated concentrations for particulate matter (2.5 micrometers) for the No Build and Build Alternatives are well below the National Ambient Air Quality Standards (NAAQS).
- Average change for all receptors combined:

	2027- Avg. of All Receptors	2047- Avg. of All Receptors
Annual Avg. PM2.5 No Build to Build Change in $\mu\text{g}/\text{m}^3$	-0.02	-0.01
24-hr PM2.5 No Build to Build Change in $\mu\text{g}/\text{m}^3$	-0.03	-0.02

- The Build Alternative would slightly decrease concentrations of PM2.5 along the proposed tunnel.
